ABOUT THIS GUIDE

This guide describes how to install, configure, and troubleshoot the 3Com® EtherLink® 10 Mbps ISA network interface card (called the 3C509B NIC in this guide).

This guide is intended for a variety of users, from network administrators who are familiar with computers and understand Ethernet networks, to small office and home users.

If release notes are shipped with your product and the information there differs from the information in this guide, follow the instructions in the release notes.

Most user guides and release notes are available in Adobe Acrobat Reader Portable Document Format (PDF) or HTML on the 3Com World Wide Web site:

http://www.3com.com/

You can download Acrobat Reader from the Adobe Systems Incorporated web site:

http://www.adobe.com/

Conventions

Table 1 and Table 2 list conventions that are used throughout this guide.

Related Documentation

The following document is intended to help you quickly install the 3C509B NIC using a standard configuration for a Microsoft Windows 95 or Windows 98 (Windows 95/98) environment:

Quick Guide for the EtherLink 10 Mbps ISA Network Interface Card

The quick guide is for users who choose the Express installation option within the 3Com Installation Wizard to install and configure the 3C509B NIC. Express installation is the choice for typical users who want a fast and easy installation method with minimal user intervention.

Express installation loads the latest Windows 95/98 drivers from the EtherDisk diskette, automatically tests the NIC and your network, and dynamically binds TCP/IP to the NIC.

If you do not have a DHCP server on your network, or if you have a static TCP/IP address, you must use the Custom installation option instead to install and configure the NIC. The Custom installation option is described in this user guide.

If your PC is not running Windows 95/98, you may not use the 3Com Installation Wizard. For installation instructions, see the appropriate chapter for your operating system in this user guide.
Year 2000 Compliance

For information on Year 2000 compliance and 3Com products, visit the 3Com Year 2000 Web page:

This chapter describes the 3C509B network interface card (NIC), provides procedures for installing the NIC, and describes the correct network cable to use for connecting each version of the NIC to an Ethernet network.

**Network Interface Card Overview**

The four versions of the 3Com® EtherLink® 10 Mbps ISA 3C509B NIC are shown in Figure 1. Use the appropriate version to connect your ISA or EISA PC to an Ethernet network using up to three different types of media.

**Figure 1  3C509B Network Interface Card Versions**

Each NIC has a light-emitting diode (LED) called the link LED, which indicates whether there is an active connection between the NIC and the hub. See “Link LED” on page 25 for a more complete description of this function.
Table 3 shows the cable, connector, transceiver, and maximum network segments for the various 3C509B NIC models.

### Table 3 Parameters for 3C509B NIC Models

### Before You Begin

Before you install the 3C509B NIC, verify that you have all of the components. If any of these items are damaged or missing, contact your shipper or network supplier.

- EtherLink 10 Mbps ISA NIC (3C509B)
- EtherLink 10 Mbps ISA Network Interface Card User Guide (this guide)
- Quick Guide for the EtherLink 10 Mbps ISA Network Interface Card
- 3Com 3C509B EtherDisk diskettes 1 and 2
You also need to know the following about your network environment:

- The kind of network cabling that is used to connect to the network at your site. You must use the same kind of network cable, and the NIC that you install in your PC must have a port that matches the connector on the network cable that you use.
- Your network protocol (IPX, IP, NetBEUI, or TCP/IP).

The next step is to install the NIC in the PC.

If your PC is running Windows 95 or Windows 98, before you install the NIC in your PC, be sure to perform the preinstallation procedure. See “Performing the Preinstallation Procedure” on page 30.

Installing the NIC

The following instructions apply to installing the 3C509B NIC in most PCs. If the instructions are not appropriate for your PC, see the documentation that accompanied your PC. You must have one ISA or EISA slot available in your PC in which to install the NIC.

**CAUTION:** Each NIC is packed in antistatic packaging to protect it during shipment. Before handling the NIC, touch the bare metal case of your PC. While you are handling the NIC, wear a wrist strap attached to the PC chassis.

If your PC is running Windows 95 or Windows 98, do not install the NIC in your PC until you have run the preinstallation procedure described in Chapter 2. If you do not run the preinstallation procedure, Windows will install the default driver and the 3Com NIC Diagnostic program will not be installed on your hard disk.

Remove all jewelry from your hands and wrists and use only insulated or nonconducting tools.

Follow these steps to install the NIC in your PC:

1. **Turn off power to the PC, and remove the power cord from the PC.**
2. **Unscrew the cover screws and remove the cover.**

On some PCs, it may be necessary to remove all cables before the cover can be removed.
3 Locate an available ISA or EISA slot and remove the screw from the corresponding backplate (Figure 2). Save the screw.

Some PCs have both ISA and PCI slots. Make sure that you install the EtherLink 10 ISA NIC in either an ISA or an EISA slot. See Figure 2.

PCI slots, the shortest of the three types of slots, are white. The longer ISA slots are black. EISA slots, the longest, are brown.

The 3C509B NIC is shipped configured to work in an ISA slot. If you install the NIC in an EISA slot, see the instructions in the next section, “Using an EISA Slot.”

Figure 2 Installing the 3C509B NIC
4 Remove and discard the backplate.
5 Ensure that the shape and length of the edge connector on the NIC match the slot that you intend to use (Figure 2).
6 Carefully insert the NIC in the slot. Press firmly with steady pressure to ensure that the NIC is fully seated in the slot.
   When the NIC is correctly inserted in the slot, the NIC backplate is flush with the PC backplate.
7 Secure the NIC with the backplate screw.
8 Replace the PC cover. Reinsert and tighten the cover screws.
9 Reconnect all power and peripheral cables.

Using an EISA Slot
The 3C509B NIC is shipped configured to work in ISA slots. If you install the NIC in an EISA slot, complete the hardware installation instructions in this chapter, and then reconfigure the NIC from ISA to EISA mode according to the instructions in “Changing NIC Configuration from ISA to EISA” on page 87.

Windows 95/98 or Windows NT
If your EISA-bus PC is running Windows 95/98 or Windows NT, do the following:
1 Disable the Plug and Play feature on the NIC. (See “Disabling Plug and Play on the NIC” on page 41.)
2 Configure the NIC for a non-Plug and Play BIOS. (See “Configuring the NIC for a Non-Plug and Play PC” on page 43.)
3 For Windows 95/98, follow instructions in Chapter 2 and Chapter 3; for Windows NT, follow instructions in Chapter 4.

Other Operating Systems
If your EISA-bus PC is running an operating system other than Windows 95/98 or Windows NT, follow the instructions in Chapter 5.
CHAPTER 1: NETWORK INTERFACE CARD INSTALLATION

Connecting to the Network
This section describes how to connect the 3C509B NIC to an Ethernet network using an RJ-45, BNC, or AUI port. Each 3C509B NIC provides different network ports, as shown in Figure 1 on page 17.

When you first install the NIC and power-on the PC, the LED on the NIC backplate lights, but the link is not active. To enable the link, you must load the network drivers. See “Link LED” on page 25 for more information.

Connecting an RJ-45 Port to the Network
Follow these steps to connect the RJ-45 port on the 3C509B-TPO, TPC, TP, and COMBO NICs to the network:

1. Plug the RJ-45 connector on the twisted-pair network cable into the RJ-45 port on the NIC backplate, as shown in Figure 3.

2. Connect the other end of the network cable to an active network port.

Go to “Link LED” on page 25.
Connecting a BNC Port to the Network

Follow these steps to connect the BNC port on the 3C509B-TPC and COMBO NICs to the network:

1. Connect the BNC connector on the thin Ethernet coaxial cable to the BNC port on the NIC, as shown in Figure 4.

   Figure 4  Connecting to the BNC Port on the 3C509B-TPC NIC

2. Connect the other end of the network cable to another PC or a 50-ohm terminator.

   Go to “Link LED” on page 25.
Connecting an AUI Port to the Network

Follow these steps to connect the AUI port (Figure 5) on the 3C509B-TP and COMBO NICs to the network:

1. Locate the 15-pin AUI port on the NIC and move the slide latch down to the open position.

   Figure 5  Connecting to the AUI Port on the 3C509B-COMBO NIC

2. Connect the thick Ethernet coaxial cable to the AUI port on the NIC.
   This connector will attach only one way. Orient the AUI connector to match the AUI port on the NIC.

3. Move the slide latch up to the closed position to lock the AUI connector in place.

4. Connect the other end of the network cable to an external transceiver.
   Go to the next section.
Each 3C509B NIC has a light-emitting diode (LED) that indicates whether an active 10BASE-T network connection exists between the NIC and the hub. The LED flashes if the polarity of the network cable is reversed.

When you first install the NIC and power-on the computer, the LED lights, but the network link is inactive. To enable the network link, you must install the network driver.

Table 4 describes the LED states.

<table>
<thead>
<tr>
<th>LED State</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>If drivers are installed, the connection is active. If drivers are not installed, this state indicates that the NIC is receiving power.</td>
</tr>
<tr>
<td>Off</td>
<td>If the LED is not lit, something is preventing the connection between the NIC and the hub.</td>
</tr>
<tr>
<td>Blinking</td>
<td>If the LED is blinking, the cable polarity is reversed. Try a different network cable or contact your network support representative.</td>
</tr>
</tbody>
</table>

If the NIC LED indicates a problem, perform the following steps:

1. Ensure that the network hub and the network cable connected to your EtherLink 10 ISA NIC comply with the 10BASE-T specifications.

2. Ensure that the hub is powered on.

You have completed the hardware installation. To install software:

- For PCs running Windows 95 or Windows 98, go to Chapter 2.
- For PCs running Windows NT, go to Chapter 4.
- For PCs running DOS, Windows 3.x, or Windows for Workgroups, go to Chapter 5.
This chapter describes how to set up your Windows 95 or Windows 98 (Windows 95/98) PC so that you can use the 3Com Installation Wizard to install and configure a 3C509B NIC.

If your PC is running Windows NT, go to Chapter 4. If your PC is running DOS, Windows 3.1, or Windows for Workgroups, go to Chapter 5.

You must first determine whether a Plug and Play BIOS is installed in your Windows 95/98 PC. See “Performing the Preinstallation Procedure” on page 30.

If you are running Windows 95/98 with a Plug and Play PC, you have the option to perform an Express installation. See the Quick Guide for the EtherLink 10 Mbps ISA Network Interface Card for Express installation procedures.

Selecting the Type of Installation

You can use the 3Com Installation Wizard to install and configure the NIC for a Windows 95/98 PC in either of two ways:

- Express installation
- Custom installation

Express Installation

Express installation, the installation method that most typical Windows 95/98 users choose, is fast and easy and requires only minimal user intervention. See the Quick Guide for the EtherLink 10 Mbps ISA Network Interface Card that came with the 3C509B NIC for information on how to perform the Express installation.

Express installation loads the latest drivers from the EtherDisk diskette, automatically tests the NIC and your network, and dynamically binds TCP/IP to the NIC.
If you do not have a DHCP server on your network, or if you have a static TCP/IP address, you must use the Custom installation option instead to install and configure the NIC.

**Custom Installation**

Custom installation is for knowledgeable network users who need to use different configuration settings or change test sequences for automated installations. This option is for network administrators, MIS departments, and value-added resellers (VARs) who need to automate the installation process. Custom installation also enables you to save the configuration settings and test options that you select during the installation for use in future installations.

Custom installation loads the latest drivers from the EtherDisk diskette, automatically tests the NIC and your network, and configures TCP/IP (dynamic or static address). The Custom option also allows you to change configuration settings, disable tests, and save installation settings for future installations.

*If you are installing the NIC in a Windows 95/98 PC that does not have a Plug and Play BIOS installed, you must install the NIC using the Custom installation option. (To determine whether your PC has a Plug and Play BIOS, see “Performing the Preinstallation Procedure” on page 30.)*

**Multiple NIC Installations**

Install and configure each NIC individually according to the appropriate procedures (Plug and Play or non-Plug and Play) for PCs running Windows 95/98. See Chapter 1, Chapter 2, and Chapter 3.

**Windows 95/98 Setup**

This section describes how to set up your Windows 95/98 environment to install and configure the 3C509B NIC using the 3Com Installation Wizard Custom installation option. This section includes procedures for PCs with or without a Plug and Play BIOS.
Figure 6 provides a graphical overview of the steps required for installing and configuring the 3C509B NIC under Windows 95/98.

Figure 6  Windows 95/98 NIC Installation Overview
Performing the Preinstallation Procedure

Preinstallation is important for proper setup of your Windows 95/98 system environment. It deletes the default .INF file and the default Windows driver for the NIC. You must perform this procedure to ensure that the latest NIC driver and the 3Com NIC Diagnostics program (a Windows-based program) can be successfully installed. If you do not perform preinstallation, the 3Com Installation Wizard will not run successfully.

Follow these steps to perform the preinstallation procedure:

1 Turn the PC power on and boot Windows 95/98.
2 Click Start in the Windows 95/98 taskbar, and then click Run.
3 Insert EtherDisk diskette 2 in drive A, and then enter: a:\preinstl
4 Click OK.

If your PC supports the Windows 95/98 Plug and Play feature, the Preinstallation Software screen appears, as shown in Figure 7, displaying a list of available IRQs. Click OK. The next step is to install the NIC in your PC (see Chapter 1). Then go to “NIC Configuration in a Windows 95/98 Plug and Play PC” to configure the NIC.

Figure 7 Preinstallation Software Screen

Record the displayed IRQs. You need to verify that an available IRQ is assigned to the NIC when the NIC Configuration Settings screen (Figure 28 on page 49) appears later in the 3Com Installation Wizard.
If your PC does not support the Windows 95/98 Plug and Play feature, the screen shown in Figure 8 appears. Click OK and go to “Disabling Plug and Play on the NIC” on page 41.

Figure 8  Non-Plug and Play BIOS Detected Screen

To install the NIC using the 3Com Installation Wizard Express installation option, see the Quick Guide for the EtherLink 10 Mbps ISA Network Interface Card that shipped with the 3C509B NIC. To set up the NIC for installation using the 3Com Installation Wizard Custom installation option, go to the next section.

NIC Configuration in a Windows 95/98 Plug and Play PC
This section describes how to set up your system environment when installing the NIC in a Windows 95/98 PC that has a Plug and Play BIOS installed.

Configuring the NIC for Windows 95, Version 950
Follow these steps to configure the NIC in a PC that has a Plug and Play BIOS installed, and that is running Windows 95 version 950 (also known as version 950a, version A, or the “retail” version):

1 Turn the power on and boot Windows 95.
   The New Hardware Found screen appears, as shown in Figure 9.
2 Insert *EtherDisk* diskette 2 in drive A, and click OK. The Install From Disk screen appears.

3 Make sure that the drive letter in the field corresponds to the diskette drive containing the *EtherDisk* diskette. Click OK.

Windows 95 copies files from the *EtherDisk* diskette to the PC hard drive and builds a driver information database.

- If you have never assigned computer and workgroup names for this PC, Windows displays the Network screen (*Figure 11*). In this case, continue at step 4.
- If you have previously assigned computer and workgroup names for this PC, the 3Com Installation Wizard starts. In this case, go to Chapter 3. You can change the Network screen fields later, as described in “Identifying Your PC on the Network” on page 59.
4 Click OK.

The Identification tab of the Network screen appears, as shown in Figure 12.

Figure 11  Network Screen

Figure 12  Identification Tab of the Network Screen
5 Type in names for the PC and its workgroup according to the following guidelines:

| Computer name | Identifies the computer on the network for other users. This entry must be a unique name of 15 characters or fewer, containing no spaces. |
| Workgroup     | Identifies the group to which your computer belongs. If you are setting up a simple peer-to-peer network, this entry must be the same for all the PCs in your network. |
| Computer Description | Displays additional details to other users on the network about this PC. Filling this field is optional. |

6 Click Close.

The 3Com Installation Wizard starts. Go to Chapter 3.

Configuring the NIC for Windows 95, Version 950b

Follow these steps to configure the NIC in a PC that has a Plug and Play BIOS installed, and that is running Windows 95 version 950b (also known as version B, OSR2, or the “OEM” version):

1 Turn the power on and boot Windows 95.

The New Hardware Found screen appears. Then the Update Device Driver Wizard screen is displayed, as shown in Figure 13.
2 Insert *EtherDisk* diskette 1 in drive A.

3 Click *Next*.

Windows 95 displays the Update Device Driver Wizard again, this time confirming that it has found the updated NIC driver.

**Figure 14** Updated Driver Found Screen

---

**Figure 13** Update Device Driver Wizard Screen
4 Click **Finish**.

The Insert Disk dialog box appears, prompting you for the disk labeled:

3Com EtherDisk for EtherLink 10 ISA Family Adapters (Disk 1)

5 Click **OK**.

The Copying Files dialog box appears, prompting you for the location of files on *EtherDisk* diskette 1:

6 **If it is not already displayed in the Copy files from entry box, type:**

   a:\

7 Click **OK**.

Windows 95 copies files from the *EtherDisk* diskette to the PC hard drive and builds a driver information database.

- If you have never assigned computer and workgroup names for this PC, Windows displays the Network screen (**Figure 15**). In this case, continue at **step 8**.
- If you have previously assigned computer and workgroup names for this PC, the 3Com Installation Wizard starts. In this case, go to **Chapter 3**. You can change the Network screen fields later, as described in “Identifying Your PC on the Network” on **page 59**.

**Figure 15** Network Screen

8 Click **OK**.

The Identification tab of the Network screen appears, as shown in **Figure 16**.
Type in names for the PC and its workgroup according to the following guidelines:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer name</td>
<td>Identifies the computer on the network for other users.</td>
<td>This entry must be a unique name of 15 characters or fewer, containing no spaces.</td>
</tr>
<tr>
<td>Workgroup</td>
<td>Identifies the group to which your computer belongs. If you are setting up a</td>
<td>peer-to-peer network, this entry must be the same for all the PCs in your network.</td>
</tr>
<tr>
<td>Computer Description</td>
<td>Displays additional details to other users on the network about this PC.</td>
<td>Filling this field is optional.</td>
</tr>
</tbody>
</table>
10 Click Close.
The Insert Disk dialog box then appears, prompting you for the disk labeled:
3Com NIC Windows 95/98 Installation Media

11 Click OK.

12 If it is not already displayed in the Copy files from entry box, type:
a:\

13 Click OK.
The 3Com Installation Wizard starts. Go to Chapter 3.

Configuring the NIC for Windows 98
This section describes how to set up your system environment when installing the NIC in a Windows 98 PC that has a Plug and Play BIOS installed.

Follow these steps to configure the NIC:

1 Turn the power on and boot Windows 98.
The New Hardware Found screen appears. Then the Add New Hardware Wizard screen is displayed.

Figure 17 Add New Hardware Wizard Screen (1)
2 Insert *EtherDisk* diskette 1 in drive A, and then click *Next*.

Windows 98 asks whether you want Windows to search for the best driver or display a list of drivers from a specific location, as shown in Figure 18.

**Figure 18** Add New Hardware Wizard Screen (2)

3 Select *Search for the best driver for your device* (Recommended), and then click *Next*.

Windows 98 requests that you select the drive locations for its driver search, as shown in Figure 19.
CHAPTER 2: CUSTOM INSTALLATION SETUP FOR WINDOWS 95/98

Figure 19  Add New Hardware Wizard Screen (3)

4 Select Floppy disk drives, and then click Next.
Windows locates the driver and requests that you verify that you want to install it, as shown in Figure 20.

Figure 20  Add New Hardware Wizard Screen (4)
5 Select The updated driver (Recommended) and then click Next.
Windows again requests that you verify that you want to install the displayed driver, as shown in Figure 21.

Figure 21 Add New Hardware Wizard Screen (5)

6 Click Next.
Windows 98 copies the required files to your hard disk and builds the driver information database.
The 3Com Installation Wizard starts. Go to Chapter 3.

Disabling Plug and Play on the NIC
If your Windows 95/98 PC does not support Plug and Play, you must disable Plug and Play on the NIC before you can install the NIC software.

Follow these steps to disable Plug and Play on the NIC:
1 After installing the NIC in the PC, turn the power on and boot Windows 95/98.
2 Insert EtherDisk diskette 2 in drive A.
3 Click Start in the Windows 95/98 taskbar, and then click Run.

4 Enter:
   a:\pnpsabl.bat
DOS PNPSABL generates the messages shown in Figure 22. Plug and Play is disabled on the NIC.

Figure 22  DOS PNPSABL Screen for Windows 95

5 If you are running Windows 95, click the X in the upper right corner of the screen to close the DOS screen. If you are running Windows 98, enter exit to return to Windows 98.

6 Remove the diskette from drive A.

7 Shut down the PC and turn the power off, then on.
The NIC is not detected when the PC reboots.
The next step is to configure the NIC.
Configuring the NIC for a Non-Plug and Play PC

This section describes the procedure to install NIC software and configure the NIC when Plug and Play has been disabled on the NIC in a Windows 95/98 PC.

Follow these steps to install the NIC software and configure the NIC:

1. **Double-click the My Computer icon, double-click the Control Panel icon, and then double-click the Add New Hardware icon.**
   
   The Add New Hardware Wizard starts and displays a warning to close all open programs before continuing. After closing all open programs, go to **step 2**.

2. **Click Next.**
   
   You are prompted to let Windows search for your new hardware.
   
   If you are running Windows 98, you are warned that the screen may go blank while Windows searches for any new Plug and Play device. Click **Next**.
   
   Windows may list all the devices it found and ask you if the device is listed below. Select **No, the device isn’t in the list**, and click **Next**. Windows responds that it can now search for non-Plug and Play hardware.

3. **Select No, I want to select the hardware from a list, and then click Next.**
   
   The Add New Hardware Wizard displays the Hardware Types list box.

4. **Select Network adapters and click Next.**
   
   Windows 95 updates the driver database and then displays the Select Device screen, as shown in **Figure 23**.
5 Insert *EtherDisk* diskette 1 in drive A and click *Have Disk*.
The Install from Disk screen appears.

6 If it is not already displayed in the Copy manufacturer's files from entry box, enter:
   \a:

7 Click *OK*.
The Select Device screen shown in Figure 25 appears, with 3Com EtherLink 10 ISA (3C509/3C509b) in Legacy mode selected.
8 Click **OK**.

Windows copies the required files and updates the driver database. The Add New Hardware Wizard displays a screen showing the I/O range assigned to the 3C509B NIC.

**Figure 26** I/O Range Assigned to the NIC Screen
The text displayed in the I/O range screen (Figure 26) varies slightly for Windows 95 and Windows 98. The essential purpose of the screen is the same for both operating systems.

9 Write down the I/O range setting displayed in the list box (or click Print, if you are connected to a printer), and then click Next.

When you configure the NIC using the 3Com Installation Wizard, make sure that this setting matches the value displayed on the NIC Configuration Settings screen. See Figure 28 on page 49.

Windows copies the required files to your hard disk. The 3Com Installation Wizard starts.

CAUTION: I/O base address 0x110 is reserved for system resources. If this address is assigned to a hardware device in your PC, contact your network administrator before continuing.

The next step is to use the 3Com Installation Wizard to install NIC software and configure the NIC. Go to Chapter 3.
Using the 3Com Installation Wizard for Windows 95/98

This chapter describes how to install and configure the 3C509B NIC under Windows 95/98 using the 3Com Installation Wizard Custom installation option.

If your PC is running Windows NT, go to Chapter 4. Wizard installation is not available for Windows NT. If your PC is running DOS, Windows 3.1, or Windows for Workgroups, go to Chapter 5.

To install the NIC using the Express installation option, see the Quick Guide for the EtherLink 10 Mbps ISA Network Interface Card.

Required Information for Custom Installation

The following information may be required to complete the Custom installation described in this chapter:

- I/O base address (for non-Plug and Play PCs)
- Available interrupt request (IRQ) level
- TCP/IP configuration data:
  - IP address
  - Subnet mask
  - Gateway address
- DNS address data:
  - Host address
  - Domain address
  - Server address

Consult with your network administrator to obtain the required information before starting.
CHAPTER 3: USING THE 3COM INSTALLATION WIZARD FOR WINDOWS 95/98

Custom Installation

In the last step of the Windows 95 or Windows 98 setup procedure in Chapter 2, clicking Next starts the 3Com Installation Wizard.

The first 3Com Installation Wizard screen appears.

Figure 27  Selecting Custom Installation Screen

Follow these steps to perform a Custom installation:

1 Select the Custom Installation radio button, shown in Figure 27.

Selecting Skip Installation at step 1 completely bypasses the Wizard installation. The drivers for the NIC will be loaded, but you may have to complete the NIC configuration by using the procedures documented in Chapter 6, “Troubleshooting for Windows 95/98 and Windows NT.” After selecting Skip Installation, go to “Completing the Installation and Configuration” on page 63.

For Express Installation, see instructions in the Quick Guide for the EtherLink 10 Mbps ISA Network Interface Card.

2 Click Next.

The NIC Configuration Settings screen appears, as shown in Figure 28.
Configuring the NIC

The list box shown in the NIC Configuration Settings screen (Figure 28) displays recommended configuration settings for the NIC. You can either accept the recommended settings or change one or more to suit your operating environment.

Figure 28 NIC Configuration Settings Screen

For Windows 95/98 non-Plug and Play PCs, make sure that the I/O Base Address value shown in the list box under Current Value is the same value that you wrote down at step 9 of “Configuring the NIC for a Non-Plug and Play PC” on page 46. Also make sure that the Interrupt Request Level value is one of the available values that you wrote down while following the instructions in “Performing the Preinstallation Procedure” on page 30.
CHAPTER 3: USING THE 3COM INSTALLATION WIZARD FOR WINDOWS 95/98

To Accept Configuration Settings
Follow these steps to accept the recommended configuration settings:
1 Click Next.
2 Go to “Testing the NIC and the Network Connection” on page 51.

To Modify Configuration Settings
Follow these steps to change configuration settings in a Windows 95/98 non-Plug and Play PC:
1 Under Network Parameter, select I/O Base Address.
2 In the Set Value selection box, click the scroll arrow to select the I/O range setting that you wrote down while following the instructions in “Configuring the NIC for Windows 95, Version 950b” on page 34 or in “Configuring the NIC for Windows 98” on page 38. See Figure 28.
3 Under Network Parameter, select Interrupt Request Level.
4 In the Set Value selection box, click the scroll arrow to select an interrupt request level that matches one of the available IRQs that you wrote down while carrying out the instructions in “Performing the Preinstallation Procedure” on page 30. See Figure 7 on page 30.
5 When you have finished changing the settings, click Next.

The next step is to test the NIC and the network connection.
Testing the NIC and the Network Connection

It is recommended that you test the NIC and then the network to verify that each is functioning properly before you continue the installation.

The NIC Test screen appears.

Figure 29  NIC Test Screen

Testing the NIC

Follow these steps to test the NIC:

1  **Click Perform NIC Test.**

While the test is running, a progress bar indicates test progress.

If a test fails, a message indicates the error type. Click the **Help** button in the error message screen to obtain more information. **Chapter 6** provides additional troubleshooting help.

A message confirms that the NIC is functioning correctly.
2 Click Next.
The Network Connection Test screen appears.

Figure 30  Network Connection Test Screen

Testing the Network Connection

Follow these steps to test the network connection:

1 **Click Perform Network Connection Test to verify that the network is functioning correctly.**

   While the test is running, a progress bar indicates test progress.

   If a test fails, a message indicates the error type. Click the Help button in the error message screen to obtain more information. Chapter 6 provides additional troubleshooting help.

   A message confirms that the network is functioning correctly.

2 **Click Next.**

   The TCP/IP Inquiry screen appears, as shown in Figure 31.
Installing TCP/IP

Installing and configuring TCP/IP is optional. If you want to access the Internet, you must install and configure TCP/IP.

Figure 31 TCP/IP Inquiry Screen

To Not Install TCP/IP
Follow these steps if you do not want to install TCP/IP:

1 Select the No radio button.
2 Click Next.
Go to “Identifying Your PC on the Network” on page 59.

To Install TCP/IP
Follow these steps to install and configure TCP/IP:

1 Select the Yes radio button.
2 Click Next.
The TCP/IP Configuration screen appears, as shown in Figure 32. The next step is to configure TCP/IP.
CHAPTER 3: USING THE 3Com INSTALLATION WIZARD FOR WINDOWS 95/98

Figure 32  TCP/IP Configuration Screen

Configuring TCP/IP
There are two ways to assign an IP address. You can obtain an IP address automatically or specify an IP address manually. Your network administrator will specify which method to use, and if required, provide an IP address for you to use.

To Obtain an IP Address Automatically
Follow these steps to obtain an IP address automatically:

1 Select the Obtain an IP address automatically radio button.
   This option dynamically assigns a new IP address each time you connect to the network.

2 Click Test IP Connection to test the DHCP server connection.
   While the test is running, a progress bar indicates test progress.
If a test fails, a message indicates the error type. Click the Help button in the error message screen to obtain more information. Chapter 6 provides additional troubleshooting help.

A message confirms that the connection to the DHCP server is functioning.

3 Click Next.

Go to "Configuring DNS" on page 56.

To Specify an IP Address Manually

Follow these steps to specify an IP address manually:

1 Select the Specify an IP address manually radio button.

2 Click Next.

The Specify an IP Address screen appears.

Figure 33 Specify an IP Address Screen
3 Enter the IP address.
4 Enter the subnet mask.
5 Enter the new gateway address.
   At least one gateway must appear in the Gateways list box before you can advance to the next screen.
6 Click Add New Gateway to add the new gateway configuration.
   The gateway is listed in the Gateways list box.
7 Click Test IP Connection to verify that the gateway connection is functioning.
   While the test is running, a progress bar indicates test progress.
   If a test fails, a message indicates the error type. Click the Help button in the error message screen to obtain more information. Chapter 6 provides additional troubleshooting help.
   A message confirms that the IP address is valid and functioning.
8 Click Next.
   The next step is to configure DNS.

Configuring DNS

Dynamic Name Server (DNS) converts a World Wide Web URL to an actual IP address. You can configure DNS either automatically or manually depending on how your network is set up.

When you click Next in the previous section, the DNS Configuration screen appears, as shown in Figure 34.
To Obtain a DNS Address Automatically

Follow these steps to obtain a DNS address automatically:

1. **Select the Obtain a DNS address automatically radio button.**
   This choice gives you a new DNS address each time you log on to the network.

2. **Click Test DNS Connection to verify that the connection to the DNS server is functioning.**
   While the test is running, a progress bar indicates test progress.
   If a test fails, a message indicates the error type. Click the Help button in the error message screen to obtain more information. Chapter 6 provides additional troubleshooting help.
   A message confirms that the DNS connection is functioning.

3. **Click Next.**
   The next step is to identify your PC on the network. Go to “Identifying Your PC on the Network” on page 59.
To Specify a DNS Address Manually

Follow these steps to specify a DNS address manually:

1. Select the **Specify DNS manually** radio button if you are using a permanent DNS address.

   **Figure 35** Specify a DNS Address Screen

If DNS has been previously configured on your PC, the fields on this screen may already be filled in.
If DNS has not been previously configured on your PC, these fields are blank and you must fill them in to enable DNS.

2. Enter the host and domain data in their respective fields.

3. To configure a new server, enter the new server address, and then click **Add New Server**.

   The new server appears in the Servers list box.

4. Click **Test DNS Connection** to verify that the connection to the DNS server is functioning.

   While the test is running, a progress bar indicates test progress.
If a test fails, a message indicates the error type. Click the Help button in the error message screen to obtain more information. Chapter 6 provides additional troubleshooting help.

A message confirms that the DNS connection is functioning.

5 **Click Next.**

The next step is to identify your PC on the network.

**Identifying Your PC on the Network**

When you click Next in the previous section, the Network Identification screen appears, as shown in Figure 36. This screen allows you to identify your PC on the network. Contact your network administrator if you do not have information to enter in these fields.

**Figure 36  Network Identification Screen**

Follow these steps to enter field data:

1 **Type the name of your computer.**

There are many PCs and other devices on a network — each one must be uniquely identified on the network. This name identifies your PC on the network. The name can have up to 15 characters. Spaces are not allowed; however, you can use hyphens.
2 Type your workgroup name.  
This name identifies the group to which your PC belongs to and is likely to communicate with. This group will include most of the network resources that you use. (If you are setting up a simple peer-to-peer network, this entry must be the same for all the PCs in your network.) The name can have up to 15 characters. See your network administrator for more information.

3 Click Next.  
The next step is to optionally save the configuration settings and test options for this installation.

Repeating a Previous Installation

You can save the configuration settings and test options that you selected during this installation for use in future installations. Saving settings is optional.

When you click Next in the previous section, the Repeat Last Installation screen appears.

Figure 37  Repeat Last Installation Screen
To Not Save Installation Settings

Follow these steps if you do not want to save these configuration settings:

1. **Select the No radio button, and then click Next.**
   The Installation Complete screen appears, as shown in Figure 40 on page 63.

2. **Click Finish.**
   Go to “Windows 95” on page 63 if you are running Windows 95 on your PC.
   Go to “Windows 98” on page 65 if you are running Windows 98 on your PC.

To Save Installation Settings

Follow these steps to save these configuration settings for future installations:

1. **Select the Yes radio button, and then click Next.**
   The Confirm Installation Settings screen appears.

   **Figure 38** Confirm Installation Settings Screen
2 Select the check boxes for tests that you want to run in future installations, and then click Next.

The Save Installation Settings screen appears.

Figure 39  Save Installation Settings Screen

3 Enter the path for the EtherDisk diskette that you are using.

This installation diskette is first copied to a temporary directory, and then that file is copied to the drive that you indicate. If you are saving to a diskette, insert a blank, formatted diskette in drive A. Upon completion, remove the diskette from the drive. You can use this diskette to perform future installations.

Otherwise, enter the name of the drive (for example, C:\) where you want to save the installation settings.

4 Click Next.

The Installation Complete screen appears, as shown in Figure 40.
Completing the Installation and Configuration

5 Click **Finish**.

If you are running Windows 95 on your PC, go to “**Windows 95**” (in the next section).

If you are running Windows 98 on your PC, go to “**Windows 98**” on page 65.

**Completing the Installation and Configuration**

Procedures for completing the installation and configuration differ for Windows 95 and Windows 98.

**Windows 95**

This section describes how to complete the NIC installation and configuration under Windows 95 after you close the 3Com Installation Wizard (at step 5 in the preceding section).

- If your PC is running Windows 95 version 950 (version A), the New Hardware Found Screen appears briefly. Wait a few seconds. The Insert Disk dialog box appears, prompting you for the Windows 95 CD.
CHAPTER 3: USING THE 3COM INSTALLATION WIZARD FOR WINDOWS 95/98

- If your PC is running Windows 95 version 950b (version B, or OSR2), the Update Device Driver Wizard appears briefly. Wait a few seconds. The Insert Disk dialog box appears, prompting you for the Windows 95 CD.

1. Insert the Windows 95 CD in your CD-ROM drive and click OK.

2. In the Copy files from box, enter the path to your CD-ROM drive, and then click OK.
   The System Settings Change dialog box appears, prompting you to restart.

   Figure 41  System Settings Change Dialog Box

3. Click Yes.

   You have successfully installed and configured the NIC under Windows 95.

   The 3Com NIC Doctor (the 3Com NIC Diagnostics program) becomes available once the NIC has been installed. See “Diagnostic Testing Under Windows 95/98 and Windows NT” on page 96 for more information about using the Diagnostics program.

   Verify that all existing installed hardware devices are still working. Typical devices to check include a sound card, CD-ROM drive, analog modem, LPT port to a printer, and game ports. If any devices are not working, go to Chapter 6 or the Windows Troubleshooting Help system.
Windows 98

This section describes how to complete the NIC installation and configuration under Windows 98 after you close the 3Com Installation Wizard.

Windows continues copying files, and prompts you to insert *EtherDisk* diskette 1.

**Figure 42** Prompt for EtherDisk Diskette 1

1. Verify that *EtherDisk* diskette 1 is in drive A. In the Copy files from box, type:
   
   ```
   a: \n   ```

2. Click OK.

   Windows 98 copies files from the floppy drive to your PC hard drive, and then requests that you insert the Windows 98 CD.

   **Figure 43** Insert Disk Dialogue Box
3 Remove *EtherDisk* diskette 1 from drive A, insert the Windows 98 CD, and then click *OK*.

Enter the Windows 98 CD directory in the *Copy files from entry box*, usually as follows:

```
d:\win98\n```

If the Windows 98 installation files are on your hard drive, click *OK*. Enter the directory in the *Copy files from entry box*, usually as follows:

```
c:\windows\options\cabs```

or

```
c:\win98\n```

Windows copies the appropriate files to the PC hard drive and displays a message that it has completed installation, as shown in Figure 44.

**Figure 44** Installation Completion Screen

![Installation Completion Screen](image-url)
4 Click Finish.

The System Settings Change dialog box appears, prompting you to restart.

Figure 45  System Settings Change Dialog Box

5 Click Yes.

You have successfully installed and configured the NIC for Windows 98.

The 3Com NIC Doctor (the 3Com NIC Diagnostics program) becomes available once the NIC has been installed. See “Diagnostic Testing Under Windows 95/98 and Windows NT” on page 96 for more information about using the Diagnostics program.

Verify that all existing installed hardware devices are still working. Typical devices to check include a sound card, CD-ROM drive, analog modem, LPT port to a printer, and game ports. If any devices are not working, go to Chapter 6 or the Windows Troubleshooting Help system.
This chapter describes how to load 3C509B NIC drivers and configure the NIC for Windows NT 4.0. You can apply the basic procedure described in this chapter to load drivers for Windows NT 3.51. The driver load procedures for Windows NT 4.0 and 3.51 are similar, with some variation due to design differences in the Microsoft interface for both versions.

If your PC is running Windows 95/98, go first to Chapter 2 and next to Chapter 3. If your PC is running DOS, Windows 3.1, or Windows for Workgroups, go to Chapter 5.

If you are installing multiple 3C509B NICs in a Windows NT PC, follow the procedure in “Installing Multiple NICs in a Windows NT PC” on page 78.

Installing Drivers and Configuring the NIC

Follow these steps to install and configure the 3C509B NIC under Windows NT 4.0:

1 Install the NIC in your PC. (See Chapter 1.)
2 Boot Windows NT.
3 Double-click the My Computer Icon, double-click the Control Panel icon, and then double-click the Network icon.

The Network screen appears, as shown in Figure 46.
4 Click the Adapters tab and click Add to display the Select Network Adapter screen (Figure 47).
5 Click **Have Disk**.

The Insert Disk screen appears.

6 Insert **EtherDisk** diskette 1 in drive A.

7 Verify that the path to drive A appears in the entry box, and then click **OK**.

The Select OEM Option screen appears, as shown in **Figure 49**.
If not already selected, select 3Com EtherLink 10 ISA (3C509) Adapter and click OK.
The 3Com EtherLink 10 ISA (3C509) Adapter Bus Location screen appears.
9 Ensure that Bus Type: ISA and Bus Number: 0 appear in their respective selection boxes, and then click OK.

Windows NT Setup copies the required files to your hard disk, and then displays the Adapters tab of the Network screen.

Figure 51 Adapters Tab of the Network Screen

The next step is to install and configure TCP/IP in Windows NT either manually or automatically.
CHAPTER 4: SOFTWARE INSTALLATION AND CONFIGURATION UNDER WINDOWS NT

10 Click Close.
The Microsoft TCP/IP Properties screen appears.

Figure 52  Microsoft TCP/IP Properties Screen

11 Choose a method to configure TCP/IP.
There are two ways to assign an IP address. You can obtain an IP address automatically or specify an IP address manually. Your network administrator will specify which method to use, and if required, provide an IP address for you to use.
To obtain an IP address automatically — Follow these steps to install and configure TCP/IP automatically:

a Select the *Obtain an IP address from a DHCP server* radio button, as shown in Figure 53.

The Microsoft TCP/IP dialog box appears (Figure 54), prompting you to verify that you want to enable DHCP.

**Figure 53** Obtain IP Address from DHCP Server Option
Figure 54  Microsoft TCP/IP Dialog Box

b  Click Yes.
The Network Settings Change dialog box appears, prompting you to restart Windows NT.

Figure 55  Network Settings Change Dialog Box (1)

c  Click Yes to restart Windows NT.
TCP/IP is installed and configured.

To specify an IP address manually — Follow these steps to install and configure TCP/IP manually:

a  Verify that the Specify an IP address radio button is selected, as shown in Figure 52.

b  Enter the IP address, subnet mask address, and default gateway address in their respective entry fields, as shown in Figure 56.
c Click OK.
The Network Settings Change dialog box appears, prompting you to restart Windows NT.

Figure 57 Network Settings Change Dialog Box (2)

d Click Yes to restart Windows NT.
TCP/IP is installed and configured.
CHAPTER 4: SOFTWARE INSTALLATION AND CONFIGURATION UNDER WINDOWS NT

After restarting Windows NT, verify that all existing installed hardware devices are still working. Typical devices to check include a sound card, CD-ROM drive, analog modem, LPT port to a printer, and game ports. If any devices are not working, go to Chapter 6 or the Windows Troubleshooting Help system.

Installing Multiple NICs in a Windows NT PC

If you are installing multiple 3C509B NICs in a Windows NT 4.0 PC, use the following procedure to ensure that the NICs maintain separate resource assignments and are installed free of conflicts.

You must use this procedure to install multiple 3C509B NICs. Failure to follow this procedure may lead to problems requiring that you reinstall your operating system.

Installing the First NIC

Follow these steps to install the first NIC when you are installing several NICs in a Windows NT PC:

1. Double-click the My Computer icon, double-click the Control Panel icon, and then double-click the Network icon.

   The Network screen appears.

2. Select the Adapters tab, and then click Add.

   The Select Network Adapter screen appears.

3. Insert EtherDisk diskette 1 in drive A, and then click Have Disk.

4. If not already displayed, type:

   a:\

5. Click OK.

   The Select OEM Option screen appears.

6. Ensure that 3Com EtherLink 10 3C509B ISA is selected, and then click OK.

   The 3Com EtherLink 10 (3C509b) ISA Adapter Bus screen appears.
Installing Multiple NICs in a Windows NT PC

7 Click OK.
Windows copies files. A message is displayed, warning you to use the Network screen to install multiple NICs.

8 Click OK.
The setup program copies files, and the Network screen reappears.

9 Ensure that 3Com EtherLink 10 3C509B ISA is selected, and then click Properties.
The 3Com EtherLink 10 Adapter Card Setup dialog box appears, showing the assigned I/O port address value.

10 Click OK, and then click OK again.
The Network screen reappears.

11 Click Close.
The Microsoft TCP/IP Properties screen appears.

12 From the Adapter box, select 3Com EtherLink 10 3C509B ISA Adapter, select a method of assigning the TCP/IP address, and then click OK.
Messages are displayed, and you are prompted to reboot Windows NT.

13 Click Yes.
The NIC is installed and configured. The next step is to install the remaining NICs.

Installing Subsequent NICs

Follow this procedure to install the remaining NICs, one at a time, after you install and configure the first NIC:

1 Perform steps 1 through 5 of the preceding procedure.
The Windows setup program displays a message warning that a network card of this type is already installed.

2 Click OK.
The 3Com EtherLink 10 (3c509b) ISA Adapter Bus screen appears. A message warns you to use the Network window to install multiple NICs.

3 Click OK.
Files are copied, and the Network screen reappears.
4 Ensure that 3Com EtherLink 10 3C509B ISA is selected, and then click Properties.
The 3Com EtherLink 10 Adapter Card Setup dialog box appears, showing the assigned I/O port address value.

5 Set the I/O port address to a nonconflicting value, and then click OK.
The 3Com EtherLink 10 (3C509B) ISA Adapter Bus screen appears again.

6 Click OK.
The setup program displays a warning message.

7 Click OK, and then click Close.
Files are copied, and then the Microsoft TCP/IP Properties screen appears.

8 From the Adapter box, select 3Com EtherLink 10 3C509B ISA Adapter, select a method of assigning the TCP/IP address, and then click OK.
Messages are displayed, and you are prompted to reboot.

9 Click No.

10 Click Start in the Windows 95/98 taskbar.

11 Select Programs, then 3Com NIC Utilities, and then 3COM NIC DOCTOR to start the 3Com NIC Diagnostics program.
The General tab of the 3Com NIC Diagnostics program appears.

12 Select the Configuration tab and then verify that the I/O base address value is set to the value that you assigned earlier in this procedure.

13 Click OK.
The second NIC is installed and configured. Repeat this procedure for additional NICs to be installed.

The I/O base address that you assign must match the I/O base address that you chose during the Custom installation. See “Configuring the NIC” on page 49.

14 When all NICs have been installed and configured, reboot Windows NT.
SOFTWARE INSTALLATION AND CONFIGURATION UNDER WINDOWS 3.x

This chapter describes how to install NIC software and configure the NIC under DOS, Windows 3.1, or Windows for Workgroups.

If your PC is running Windows 95/98, go first to Chapter 2 and next to Chapter 3. If your PC is running Windows NT, go to Chapter 4.

Installing NetWare Drivers for DOS, Windows 3.1, and Windows for Workgroups

This section describes how to use the Intelligent Auto Install program COMSLINK.EXE to install client and driver software for DOS environments and Novell NetWare 3.1x or 4.1x under Windows 3.1 and Windows for Workgroups.

When your system administrator configures a 3Install account on your server, the Intelligent Auto Install program logs on to the server and updates the client software. COMSLINK.EXE creates a new AUTOEXEC.BAT file and saves the old file as AUTOEXEC.3CM. COMSLINK.EXE also creates a new CONFIG.SYS file and saves the old file as CONFIG.3CM.

Intelligent Auto Install Requirements

To use the Intelligent Auto Install program COMSLINK.EXE, your PC should have only one 3C509B NIC installed and a minimum of 1 MB of available hard disk space.

Running the Intelligent Auto Install Program

Follow these steps to run the Intelligent Auto Install program to configure the NIC:

1. Install the NIC and connect it to the network, as described in Chapter 1.
2. Reboot to DOS.
3 Insert *EtherDisk* diskette 2 in drive A.

4 Run the DOS installation program. At the DOS prompt, enter:
   
   a:install
   
   The main menu is displayed, as shown in Figure 58.
   
   The 3Com software license agreement is displayed the first time you run the DOS installation program. Type Y to accept the agreement and display the main menu.
   
   ![Main Menu of the DOS Installation Program](image)

5 Select *Intelligent Auto Install for NetWare* and press Enter.
   
   The Intelligent Auto Installation menu is displayed.

6 Select one of the following menu choices:
   
   - *Intelligent Auto Install for DOS*
   - *Intelligent Auto Install for Windows 3.1x*
   - *Intelligent Auto Install for WFW 3.1*
   
   Follow the prompts.
When the Intelligent Auto Install process is finished, remove EtherDisk diskette 2 from drive A and reboot the PC.

If you are running Windows 3.1x, after you connect to the NetWare server, run the W$INSTALL program for full Windows support. Contact your system administrator for the location of this NetWare utility.

If problems occur only when using the Intelligent Auto Install program, display or print the COMSLINK.LOG file to see a list of all events occurring during the Intelligent Auto Install installation and configuration process.

- To display the file, enter:
  
  `type comslink.log | more`

- To print the file, enter:

  `print comslink.log`

To install the network drivers for Windows 3.1x, Windows for Workgroups, or DOS in a non-NetWare environment, see the appropriate text files in the HELP directory on EtherDisk diskette 2.

Obtaining NetWare Loadable Modules

You can obtain current NetWare Loadable Modules (NLMs) for the NetWare servers listed in Table 5 from the Novell Web site, www.support.novell.com.

Table 5  NetWare NLMs

<table>
<thead>
<tr>
<th>NetWare Server</th>
<th>NLM Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>NetWare 3.12</td>

Removing NIC Software

EtherDisk diskette 2 includes an uninstallation program to remove the 3C509B NIC software.

To run the uninstallation program, at the DOS prompt, enter:

```
un3c509.exe
```

The NIC software is removed from your PC.

Configuring the NIC

This section describes how to configure the 3C509B NIC after you install it in your PC. If only one 3C509B NIC is installed and you are running Novell NetWare, use the Intelligent Auto Install program to configure the NIC and load the appropriate driver, as described earlier in this chapter.

To configure the 3C509B NIC, follow these steps:

1. Install the NIC (see Chapter 1) and the network driver (earlier in this chapter).
2. Reboot to DOS.
3. Insert EtherDisk diskette 2 in drive A.
4. Run the installation program. Enter:
   ```
a:install
```
   The main menu is displayed, as shown in Figure 58 on page 82.

   The 3Com software license agreement is displayed the first time you run the DOS installation program. Type Y to accept the agreement and display the main menu.

5. Select Configuration and Diagnostic Program.
   If you have more than one NIC installed in the PC, select the NIC you want to configure. Tab to the Select button and press Enter.
6 Select **Configure NIC** and press Enter.
The NIC Configuration screen is displayed.

*Figure 59* NIC Configuration Screen

7 Select **Auto Configure** and press Enter.
The I/O base address, interrupt request level, and transceiver type are automatically configured to settings that do not conflict with other devices in your PC.
To change settings, follow the steps in “Changing Configuration Settings” later in this chapter.
If you encounter a problem with the **Auto Configure** option, press F1 for help.
The **OK** button is selected when configuration is completed.

8 Press Enter to accept the configuration parameters.
The NIC is now configured.
Reconfiguring the NIC

EISA PCs come with an automatic configuration program that allocates resources to each installed hardware device in the PC.

Changing an ISA NIC to EISA mode enables the NIC to be configured by the EISA configuration program for correct EISA PC settings.

You can configure an ISA NIC for EISA mode only if the NIC is installed in an EISA slot.

If you have configured an ISA NIC for an EISA PC, the PROTOCOL.INI file looks for the parameter SLOT=number rather than the I/O base address. The SLOT number is required only if you have multiple NICs installed.

The following procedures are general. If you require more detail, see the configuration documentation that accompanied your PC.

Changing NIC Configuration from ISA to EISA

Follow these steps to configure the 3C509B ISA NIC for an EISA PC:

1. Run the installation program as described in the preceding section, “Configuring the NIC.”

2. From the main menu of the installation program, select Configuration and Diagnostic Program.

3. If you have more than one NIC installed, use the arrow keys to select the NIC you want to configure. Tab to the Select button and press Enter.
   A screen identifying the NIC is displayed with the Test menu bar item highlighted.

4. Use the arrow keys to select Install. The Configure NIC option is selected. Press Enter.
5 When the NIC Configuration dialog box is displayed, select Modify and press Enter.
The I/O Base Address field is selected. An I/O Base Address dialog box appears.

6 Use the arrow key to select EISA and press Enter.
The I/O base address setting is changed.

7 Select OK to save the new configuration setting and press Enter.

8 Exit the program and remove EtherDisk diskette 2 from drive A.

9 Insert the EISA configuration utility diskette provided with your PC in drive A.

10 Turn the power off. Wait 10 seconds, and then turn the power on.

11 Follow the instructions accompanying your EISA PC to run the EISA Configuration Program.
When the program prompts you for .CFG files to copy, insert EtherDisk diskette 2, press Enter, and select the appropriate file for your NIC as shown in Table 7:

<table>
<thead>
<tr>
<th>For this NIC...</th>
<th>Select this .CFG file</th>
</tr>
</thead>
<tbody>
<tr>
<td>3C509B-COMBO</td>
<td>!TCM5094.CFG</td>
</tr>
<tr>
<td>3C509B-TP</td>
<td>!TCM5090.CFG</td>
</tr>
<tr>
<td>3C509B-TPO</td>
<td>!TCM5095.CFG</td>
</tr>
<tr>
<td>3C509B-TPC</td>
<td>!TCM5098.CFG</td>
</tr>
</tbody>
</table>

If you are prompted for the wrong !TCM file:

a Turn the power off and remove the NIC.

b Clean the edge connectors on the NIC.

c Reinsert the NIC in the slot. Make sure the NIC is fully seated in the slot.

d Turn the power on.

You should now be prompted for the correct !TCM file.
Changing NIC Configuration from EISA to ISA

To reconfigure the 3C509B NIC to ISA mode, the NIC must be installed in an EISA slot.

Follow these steps to reconfigure the NIC for an ISA PC:

1. Run the installation program as described in “Configuring the NIC” on page 85.
2. From the main menu, select Configuration and Diagnostic Program.
3. If necessary, use the arrow keys to select the NIC you want to configure. Tab to the Select button and press Enter.
4. A screen identifying the NIC is displayed with the Test menu bar item already selected.
5. Select Install and press Enter.
6. When the NIC Configuration dialog box appears, select Modify and press Enter.
   The I/O Base Address field is selected. An I/O Base Address dialog box appears.
7. Use the arrow keys to select ISA and press Enter.
   The I/O base address setting is changed.
   *If your PC supports Plug and Play, the I/O Base Address, Interrupt Request Level, and Boot PROM parameters are set automatically.*
8. Either select the option setting in the NIC Configuration dialog box for parameters that you want to change, or accept the defaults.
   For more information about a setting, select the setting and press F1 (Help).
9. Select OK to save the new configuration setting to the NIC and press Enter.
10. Remove EtherDisk diskette 2 from drive A.
11. Insert the PC configuration program diskette for your PC in drive A and reboot the PC.
CHAPTER 5: SOFTWARE INSTALLATION AND CONFIGURATION UNDER WINDOWS 3.x

Changing Configuration Settings

The NIC Configuration screen (Figure 59 on page 86) shows the current configuration settings for the installed NIC. You can change the default settings to:

- Disable Plug and Play
- Use a boot PROM
- Optimize driver performance for a specific operating system
- Optimize driver performance for operation on a server
- Change the type of network connector

Table 8 lists each software option, the default setting for that option, and other available settings for that option. For more information about an option, select the option and press F1.

Table 8 NIC Option Settings

Changing Configuration Settings

If you are using a PC that supports Plug and Play, the IRQ and I/O base address values are set by Plug and Play. You can set the boot PROM size to indicate the presence and size of a network boot PROM. For instructions on disabling Plug and Play, see “Disabling Plug and Play on the NIC” on page 41.

Follow these steps to change the configuration settings:

1. Run the installation program described in “Configuring the NIC” on page 85.
2. From the main menu (see Figure 58 on page 82), select Configuration and Diagnostic Program.
3. If multiple NICs are installed in the PC, use the arrow keys to select the NIC you want to configure. Press Tab to move to the Select button and press Enter.
4. Press Tab to display the dialog box, and then select the option that you want to change. Press Enter.
5. Use the arrow keys to scroll through the list of settings for that option. Select a setting and press Enter.
6. Continue this procedure for other options. For more information on a specific option, select the option and press F1.
7. To save the new settings, select OK and press Enter.
This chapter explains how to isolate and solve problems that may occur when you install the 3C509B NIC in a PC running Windows 95, Windows 98, or Windows NT.

Checklist

If you experience problems installing the NIC, first check these items:

- Check the NIC LED, as described in “Link LED” on page 25.
- Check the connectors. Examine the cable for obvious signs of damage, wear, or crimping. Substitute a known working cable.
- Check whether the NIC software is correctly installed. See Chapter 2 and Chapter 3.

If the problem persists, go to related procedures in this chapter or see Appendix C, “Technical Support.”

Resolving Hardware Conflicts in Windows 95/98 and Windows NT

Follow these steps to resolve hardware resource conflicts (I/O base address or interrupt request level) if your PC is running either Windows 95/98 or Windows NT.

1. **From the Start menu, select Help.**

   The Help window is displayed.

2. **Select the Contents tab, and then select Troubleshooting.**

3. **Double-click If you have a hardware conflict.**

4. **Click Start the Conflict Troubleshooter and follow the instructions.**
CHAPTER 6: TROUBLESHOOTING FOR WINDOWS 95/98 AND WINDOWS NT

Changing the I/O Base Address or the Interrupt Request Level

If you discover that you have a resource conflict, you can change the I/O base address or the interrupt request level (IRQ). If you are adding new hardware to your system, you may need to change a resource assignment to avoid a conflict. The following procedures describe how to change resource allocations for your Windows 95/98 or Windows NT PC.

Windows 95/98

Follow these steps to change the IRQ level assignment or the I/O base address in a Windows 95/98 PC:

1 Double-click the My Computer icon, double-click the Control Panel icon, and then double-click the System icon.

The System Properties window is displayed.

2 Select the Device Manager tab, double-click Network adapters, and then double-click 3Com EtherLink 10 ISA Adapter.

3 Select the Resources tab.

4 Depending on the type of conflict that you have, select either Input/Output Range or Interrupt Request.

5 Select the resource that you want to change (IRQ or Input/Output Range) and select Change Settings. (If these options appear dimmed, clear the Use automatic settings check box.)

6 Scroll to a value that you know is available, and then click OK.

You recorded available IRQ values during the preinstallation procedure. See “Performing the Preinstallation Procedure” on page 30.

Before you reboot Windows 95/98, make sure that the value that you assign to a resource matches the value for the same resource in the NIC Configuration Settings screen (similar to that shown in Figure 28 on page 49) in the 3Com NIC Diagnostic program.

7 Close all open windows and restart the PC.

The hardware conflict should be resolved. If not, consult your system administrator.
Changing the I/O Base Address or the Interrupt Request Level

Windows NT

Follow these steps to change the IRQ level assignment or the I/O base address in a Windows NT PC:

1. Click Start in the Windows NT taskbar.
2. Select Programs, then 3Com NIC Utilities, and then 3COM NIC DOCTOR to start the 3Com NIC Diagnostics program.
   The General tab of the 3Com NIC Diagnostics program appears.
3. Select the Configuration tab.
4. Select the resource (I/O base address or interrupt request level) that you want to change in the Network Parameter column of the list box.
   The current value for that parameter appears in the Set Value entry box.
5. Scroll to the value that you want to assign, and then click OK.
6. If you change the I/O base address, before you restart Windows NT, make sure that the address that you assign matches the I/O base address on the Adapters tab screen.
   Follow these steps to verify the base addresses:
   a. Double-click the My Computer icon, double-click the Control Panel icon, double-click the Network icon, and then select the Adapters tab.
      3Com EtherLink 10 (3C509b) ISA Adapter is selected.
   b. Click Properties.
      The I/O Port Address value appears in the scroll box on the 3Com EtherLink 10 Adapter Card Setup screen.
      Ensure that this value matches the value set in step 4.
      To change this value, scroll to the matching value, and then click OK.
   c. Click OK to close the 3Com NIC Diagnostics program.
7. Restart the PC.
   The hardware conflict should be resolved. If not, consult your system administrator.
Windows 95/98, and Windows NT Troubleshooting

A comprehensive section on troubleshooting tips and techniques is provided in the online Help. To access the online Help, follow these steps:

1. Click **Start** in the Windows 95/98/NT taskbar.
2. Select **Programs**, then **3Com NIC Utilities**, and then **3COM NIC DOCTOR** to start the 3Com NIC Diagnostics program.
   
The General tab of the 3Com NIC Diagnostics program appears.
3. Select the Support tab.
4. Click **Release Notes**.

Diagnostic Testing Under Windows 95/98 and Windows NT

The 3Com NIC Diagnostics program for Windows 95, Windows 98, and Windows NT is installed on your hard disk when you install the NIC software.

Starting the 3Com NIC Diagnostics Program

You can start the program by following these steps:

1. Click **Start** in the Windows 95/98/NT taskbar.
2. Select **Programs**, then **3Com NIC Utilities**, and then **3COM NIC DOCTOR** to start the 3Com NIC Diagnostics program.
   
The General tab of the 3Com NIC Diagnostics program appears.

   For Windows 95/98 or Windows NT, you can also follow these steps to run the 3Com NIC Diagnostics program:

   1. Click **Start** in the taskbar, and then select **Run**.
      
The Run dialog box appears.

   2. In the Open entry box, type: 
      
   `tcaudiaiag`

   3. Click **OK**.

   Table 9 shows the various tab screens that are available within the 3Com NIC Diagnostics program.
Table 9  3Com NIC Diagnostic Program Tab Screens

<table>
<thead>
<tr>
<th>Tab</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>The General tab is the first screen to appear when you start the diagnostics program. This screen identifies the NICs installed in your PC and lets you get information that is specific to the selected NIC. This screen also provides check boxes for adding the 3Com NIC Diagnostics program icon to the taskbar tray of your PC and enabling the PC as an auto echo server system on the network. Click NIC Details to display a screen that lists detailed information about the selected NIC.</td>
</tr>
<tr>
<td>Configuration</td>
<td>The Configuration tab is used to change NIC configuration settings.</td>
</tr>
<tr>
<td>Statistics</td>
<td>The Statistics tab provides network traffic information that is updated by the NIC driver several times a minute.</td>
</tr>
<tr>
<td>Diagnostics</td>
<td>The Diagnostics tab provides access to the 3Com NIC Diagnostics program that lets you test the 3C509B NIC or change configuration settings.</td>
</tr>
<tr>
<td>Support</td>
<td>The Support tab provides five buttons, each of which provides different support-related information or options.</td>
</tr>
<tr>

Running Tests

Two tests help you troubleshoot problems with the NIC:

- NIC test
- Network test

NIC Test

Run the NIC test to determine that the NIC is working correctly. Be sure to run this test after you have verified that the network is functioning.

Follow these steps to run the NIC test:

1. Click Run NIC Test to begin the test.
   A progress bar appears. Results are displayed when the test is completed.
2. Click OK.

Network Test

Run the Network test first if you are experiencing problems with the NIC. This tests the ability of the 3C509B NIC to transmit and receive data while connected to the network.

Follow these steps to run the Network test:

1. Click Run Network Test.
   The Network Connectivity Test screen is displayed.
2. Click Start to begin the test.
   The PC on the network acting as the receiver in this test is identified on the right side of the screen. Results are displayed when the test is completed.
   To run the test continuously, select the Continuous check box.
3. Click Close.

Uninstalling the NIC

If you have problems installing NIC software, allow the 3Com Installation Wizard to finish. The installation cannot be canceled once it is started.

CAUTION: Before attempting to reinstall 3Com NIC installation software, you must first perform the uninstallation process.
Follow these steps to uninstall the NIC software in a PC running Windows 95, Windows 98, or Windows NT.

1. **Double-click the My Computer icon, double-click the Control Panel icon, and then double-click the Network icon.**

2. **Select the 3C509B NIC.**
   - For Windows 95/98 — On the Configuration tab, select the 3Com EtherLink 10 ISA NIC.
   - For Windows NT — On the Configuration tab, select Network adapters, and then select the 3Com EtherLink 10 ISA NIC.

3. **Click Remove.**

4. **Click OK.**
   The System Settings Change screen appears, prompting you to restart your PC.

5. **Click Yes.**
   The NIC is no longer recognized by your operating system. All 3C509B NIC software is removed from your PC.

---

**Reinstalling NIC Software**

When an event such as a hard disk crash occurs, the original configuration file written to the PC hard disk may be lost or damaged. In this case, you must reinstall the NIC software for the NIC to be operational.

To reinstall 3Com NIC software for Windows 95, follow the procedure specified in "Configuring the NIC for Windows 95, Version 950b" on page 34.

To reinstall 3Com NIC software for Windows 98, follow the procedure specified in "Configuring the NIC for Windows 98" on page 38.

To reinstall 3Com NIC software using saved settings from a previous installation, go to the next section.

If you are unable to reinstall the NIC or the NIC software successfully, see the appropriate troubleshooting sections in this chapter.
Performing Automated Installations
This section describes how to install and configure 3C509B NICs when you want to perform multiple installations automatically or when you must reinstall the NIC software because it has been lost or corrupted.

This procedure uses configuration settings saved from a previous installation.

Installing from the Hard Disk
Follow these steps if the saved configuration settings are in a file on your hard disk:

1. Click Start in the taskbar, click Run, and then enter the path to the file that contains the saved configuration settings that you want to use to reinstall the NIC.
2. Click OK.
   The 3Com Installation Wizard starts and displays the first screen.
3. Click Install.
   3Com Installation Wizard screens appear sequentially, displaying the settings saved in the original installation.

Installing from a Diskette
Follow these steps if the saved configuration settings are in a file on a diskette:

1. Insert the diskette containing the saved configuration settings in drive A.
2. Click Start in the taskbar, click Run, and then enter:
   a:
3. Click OK.
   The 3Com Installation Wizard starts and displays the first screen.
4. Click Install.
   3Com Installation Wizard screens appear sequentially, displaying the settings saved in the original installation.
TROUBLESHOOTING FOR WINDOWS 3.x

This chapter explains how to isolate and solve problems that may occur when you install the 3C509B NIC in a PC running DOS, Windows 3.1, or Windows for Workgroups.

Checklist

If you experience problems installing the NIC, first check these items:

- Check the NIC LED, as described in “Link LED” on page 25.
- Check the connectors. Examine the cable for obvious signs of damage, wear, or crimping. Substitute a known working cable.
- Check whether the NIC software is correctly installed. See Chapter 4.
- Make sure the drivers installed are correct for the network operating system you are running (see “Installing Other Supported Network Drivers” on page 84).

If the problem persists, go to related procedures in this chapter or see Appendix C, “Technical Support.”

Diagnostic Testing Under Windows 3.x

The Configuration and Diagnostics Program, on EtherDisk diskette 2, includes the diagnostics program used for DOS, Windows 3.x, and Windows for Workgroups. Run the diagnostic tests after installing the 3C509B NIC to check overall NIC operation and to isolate failures. After the NIC is installed, if the default tests do not isolate the problem, tailor the test parameters to accommodate your specific situation.

Do not run diagnostic tests with device drivers or memory managers installed.
CHAPTER 7: TROUBLESHOOTING FOR WINDOWS 3.x

Boot your PC to DOS to avoid installing device drivers or memory managers.

Diagnostic tests are divided into three groups:

- The Group 1 tests check the physical components, connectors, and circuitry on the NIC.
- The Group 2 Network Loopback Test (for the 3C509B-TPC and COMBO NICs only) checks to see if the NIC can transmit and receive data through the coaxial transceiver.
- The Group 3 test (the Echo Exchange Test) tests to see if the NIC can transmit and receive data while on the network.

If the NIC passes the group tests successfully, the NIC is functioning correctly. If the problem remains, look at cabling, software, driver configuration, and issues that can affect network functionality.

Starting the DOS Configuration and Diagnostics Program

Follow these steps to run the Configuration and Diagnostics Program:

1. **Boot to DOS. (Use a DOS diskette.)**

2. **Insert EtherDisk diskette 2 in drive A.**

3. **Run the installation program. Enter:**
   
   ```
   a:install
   ```
   
   The main menu is displayed, as shown in Figure 58 on page 82.

4. **Select Configuration and Diagnostics Program and press Enter.**
   
   If multiple NICs are installed, each NIC is listed.

5. **Select the NIC you want to test and press Enter.**

   You can also run the tests from the command line. At the system prompt, enter:

   ```
   3c5x9cfg run
   ```
Running the Group 1 Tests

Group 1 tests evaluate the physical components of the NIC. A Group 1 test failure can indicate a faulty NIC.

For a description of each Group 1 test, press F1 to access Help. In the Help screen, tab to the Index button and press Enter. Use the arrow keys to move through the Index listings. Select Test Definitions and press Enter.

Follow these steps to run the Group 1 tests:

1. From the Test menu, select Run Tests and press Enter.
   The Run Tests dialog box appears with the Start button already selected.

2. Press Enter to start the tests.
   Group 1 tests run 10 times (default setting) unless you specify otherwise. The test results are displayed in the Results column.

Running the Group 2 Test

The Group 2 test is the Network Loopback Test. It tests whether the 3C509B-COMBO and 3C509B-TPC NICs can transmit and receive data over thin Ethernet coaxial wire. This test requires either installing a loopback plug at the transceiver connection on the NIC or running the test on an idle network.

A failure in this test usually indicates a cabling problem.

CAUTION: Running the Group 2 test while connected to an active network can cause intermittent failures.

Assembling a Loopback Plug

If you do not have a loopback plug, you can order one from your authorized network supplier or you can make your own. You can purchase the terminators from your network supplier (3Com part number 3C535).

To assemble the loopback plug, connect two 50-ohm network cable terminators to a T connector, as shown in Figure 60.
Figure 60  Assembling a Loopback Plug

Starting the Group 2 Test
Follow these steps to run the Group 2 test on either the 3C509B-TPC or 3C509B-COMBO NIC:
1  Connect the loopback plug to the round BNC connector on the NIC.
2  Start the Configuration and Diagnostics Program, as described in “Starting the DOS Configuration and Diagnostics Program” on page 102.
3  From the Test menu, select Test Setup.
4  Enable the Group 2 test. Select OK and press Enter.
5  Go to the Run Tests dialog box to start the tests.
6  After the test is completed:
   a  Exit the Configuration and Diagnostics Program.
   b  Remove the loopback plug.

Running the Group 3 Test
The Group 3 test is the Echo Exchange Test. It tests to see if the NIC can transmit and receive data while connected to the network. If you have successfully run the Group 1 and Group 2 tests, a failure in the Group 3 test usually indicates a cabling, hub, or network problem.

CAUTION: Do not use an active network to run the Group 3 test.
To run the Group 3 test on the network, you need a second PC to serve as an echo server, and it must have a 3Com NIC installed. The echo server receives packets from and echoes packets back to the NIC being tested. The diagnostics program provided with the NIC supports the 3C509B echo server diagnostics program.

**Setting Up an Echo Server**

Follow these steps to set up an echo server:

1. **Insert the EtherDisk diskette for the echo server NIC in drive A of the echo server.**

2. **Start the diagnostics program on the echo server.**

The diagnostics program that you use is dictated by the NIC that is installed in the echo server. See Table 10. At the DOS prompt, enter the diagnostics program name for the associated NIC.

<table>
<thead>
<tr>
<th>Diagnostics Program Name</th>
<th>NIC Installed in the Echo Server</th>
</tr>
</thead>
<tbody>
<tr>
<td>3C503.EXE</td>
<td>EtherLink II or II TP, EtherLink II/16 or II/16 TP</td>
</tr>
<tr>
<td>3C505.EXE</td>
<td>EtherLink Plus</td>
</tr>
<tr>
<td>3C507.EXE</td>
<td>EtherLink 16 or EtherLink 16 TP</td>
</tr>
<tr>
<td>3C508CFG.EXE</td>
<td>3Com Red</td>
</tr>
<tr>
<td>3C5X9CFG.EXE</td>
<td>EtherLink 10 family</td>
</tr>
<tr>
<td>3C523.EXE</td>
<td>EtherLink/MC</td>
</tr>
<tr>
<td>3C523TP.EXE</td>
<td>EtherLink/MC TP</td>
</tr>
<tr>
<td>3C527.EXE</td>
<td>EtherLink/MC 32</td>
</tr>
<tr>
<td>3C59XCFG.EXE</td>
<td>EtherLink 10 EISA/PCI bus master family (including Fast EtherLink NIC running at 10 Mbps)</td>
</tr>
<tr>
<td>3C90XCFG.EXE</td>
<td>EtherLink XL and Fast EtherLink XL family of NICs running at 10 Mbps</td>
</tr>
</tbody>
</table>

The main window of the diagnostics program is displayed.

3. **From the Test menu, select Echo Server, and then click Start.**

A message confirms that your PC is now set up as an echo server.
Starting the Group 3 Test
Follow these steps to run the Group 3 test on the 3C509B NIC:

1. Start the Configuration and Diagnostics Program on the PC in which the NIC to be tested is installed.
2. From the Test menu, select Test Setup.
3. Enable the Group 3 test. Select OK and press Enter.
4. Go to the Run Tests dialog box to start the tests.
5. After the test is completed:
   a. Exit the program on the echo server.
   b. Exit the Configuration and Diagnostics Program.

Getting Help If a Test Fails
If a diagnostic test fails, the NIC may not be defective. The problem may be incorrect configuration settings, settings that conflict with other NICs, or improper installation.

For more information about a failed diagnostic test:
- Select the test that failed in the Run Tests dialog box and press Enter.
- Select the Zoom button and press Enter.

CAUTION: If you intend to remove the NIC from your PC, make sure to turn the power off before removing or reinserting the NIC.
This appendix lists specifications, pin assignments, and cable requirements for the 3C509B NIC.

### NIC Specifications

#### Network Interface

<table>
<thead>
<tr>
<th>Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>

Cable Specifications

To comply with the limits of a Class B digital device, 3Com requires that you use quality interface cables when connecting to this device. Changes or modifications not expressly approved by 3Com could void the user's authority to operate this equipment. Examples of supported cable types are shown in Table 12.

Table 12 Supported Cable Types

<table>
<thead>
<tr>
<th>Type</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unshielded twisted-pair</td>
<td>Category 3 LAN and high-speed data cable, for example, Anixter CM-00424BAG-3 or equivalent</td>
</tr>
<tr>
<td>100-ohm</td>
<td>Category 4 extended distance LAN cable, for example, Anixter CM-00424BAG-4 or equivalent</td>
</tr>
<tr>
<td>Thin coaxial</td>
<td>RG58 A/U or C/U (50 ohm ± 4)</td>
</tr>
<tr>
<td>Thick coaxial</td>
<td>RG59 (50 ohm ± 2)</td>
</tr>
</tbody>
</table>

The 10BASE-T cable you use for establishing a connection to the network should not be used for any other purpose. It must be dedicated to the link between the NIC and the network.

For complete cabling details, see the IEEE 802.3 specification, section 8.4, “Coaxial Cables and Electrical Parameters.”
CROSSOVER CABLE TROUBLESHOOTING TIPS

When you work with 10BASE-T cabling, concentrators, and NICs from different vendors, it is possible to connect everything but still have no communication between file servers and workstations.

When there are several unknown variables, it is difficult to determine which component is failing. Start with the following procedure to narrow the range of possible causes:

1 **Determine whether your equipment complies with the 10BASE-T standard.**
   This is particularly important for data concentrators (hubs or repeaters).

2 **Connect a straight-through cable from the PC to the hub.**
   The hub performs an internal crossover so that the signal can go from TD+ to RD+ and TD– to RD–. When you look at an RJ-45 connector from the front (that is, the opposite side from where the wires enter the connector), pin 1 is identified on the right side when the metal contacts are facing up.

3 **Make sure that the TD+ and TD– wires are twisted together, and that the RD+ and RD– wires are twisted together.**
   Using wires from opposing pairs can cause signals to be lost.
Troubleshooting Hubs with Crossover Cable

A crossover cable can be used to isolate failures in these components when hub performance or impedance settings are in question.

1. Connect a file server and a client PC back to back with a crossover cable to verify that the NIC and network operating system are properly configured.

2. To make a crossover cable, connect TD+ to RD+ and TD– to RD–.

The cable performs the crossover that is usually performed by the hub. Figure 62 shows the pinouts for the crossover cable:

Figure 62  Straight-Through and Crossover Cable Pinouts

If the file server and client PC function together as a small network, then either the existing cabling or the hub is failing.

- With a correct crossover connection, the LED lights.
- With a straight-through connection, the LED does not light.
- With a polarity mismatch (that is, TD+ to RD– instead of TD+ to RD+), the LED blinks.
3Com provides easy access to technical support information through a variety of services. This appendix describes these services.

Information contained in this appendix is correct at time of publication. For the most recent information, 3Com recommends that you access the 3Com Corporation World Wide Web site.

**Online Technical Services**

3Com offers worldwide product support 24 hours a day, 7 days a week, through the following online systems:

- World Wide Web site
- 3Com Knowledgebase Web Services
- 3Com FTP site
- 3Com Bulletin Board Service (3Com BBS)
- 3Com FactsSM Automated Fax Service

**World Wide Web Site**

To access the latest networking information on the 3Com Corporation World Wide Web site enter this URL into your Internet browser:

[http://www.3com.com/](http://www.3com.com/)

This service provides access to online support information such as technical documentation and software library, as well as support options that range from technical education to maintenance and professional services.
3Com Knowledgebase Web Services

This interactive tool contains technical product information compiled by 3Com expert technical engineers around the globe. Located on the World Wide Web at http://knowledgebase.3com.com, this service gives all 3Com customers and partners complementary, round-the-clock access to technical information on most 3Com products.

3Com FTP Site

Download drivers, patches, software, and MIBs across the Internet from the 3Com public FTP site. This service is available 24 hours a day, 7 days a week.

To connect to the 3Com FTP site, enter the following information into your FTP client:
- Hostname: ftp.3com.com
- Username: anonymous
- Password: <your Internet e-mail address>

You do not need a user name and password with Web browser software such as Netscape Navigator and Internet Explorer.

3Com Bulletin Board Service

The 3Com BBS contains patches, software, and drivers for 3Com products. This service is available through analog modem or digital modem (ISDN) 24 hours a day, 7 days a week.

Access by Analog Modem

To reach the service by modem, set your modem to 8 data bits, no parity, and 1 stop bit. Call the telephone number nearest you:

<table>
<thead>
<tr>
<th>Country</th>

Support from Your Network Supplier

Access by Digital Modem

ISDN users can dial in to the 3Com BBS using a digital modem for fast access up to 64 Kbps. To access the 3Com BBS using ISDN, call the following number:

1 847 262 6000

3Com Facts Automated Fax Service

The 3Com Facts automated fax service provides technical articles, diagrams, and troubleshooting instructions on 3Com products 24 hours a day, 7 days a week.

Call 3Com Facts using your Touch-Tone telephone:

1 408 727 7021

Support from Your Network Supplier

If you require additional assistance, contact your network supplier. Many suppliers are authorized 3Com service partners who are qualified to provide a variety of services, including network planning, installation, hardware maintenance, application training, and support services.

When you contact your network supplier for assistance, have the following information ready:

- Product model name, part number, and serial number
- A list of system hardware and software, including revision levels
- Diagnostic error messages
- Details about recent configuration changes, if applicable

If you are unable to contact your network supplier, see the following section on how to contact 3Com.
APPENDIX C: TECHNICAL SUPPORT

Support from 3Com

If you are unable to obtain assistance from the 3Com online technical resources or from your network supplier, 3Com offers technical telephone support services. To find out more about your support options, call the 3Com technical telephone support phone number at the location nearest you.

When you contact 3Com for assistance, have the following information ready:
- Product model name, part number, and serial number
- A list of system hardware and software, including revision levels
- Diagnostic error messages
- Details about recent configuration changes, if applicable

Here is a list of worldwide technical telephone support numbers:

3Com Corporation LIMITED WARRANTY
EtherLink 10 1Mbps SA Network Interface Cards

HARDWARE
3Com warrants this hardware product to be free from defects in workmanship and materials, under normal use and service, for the following length of time from the date of purchase from 3Com or its authorized reseller:

Lifetime
3Com’s sole obligation under this express warranty shall be, at 3Com’s option and expense, to repair the defective product or part, deliver to Customer an equivalent product or part to replace the defective item, or if neither of the two foregoing options is reasonably available, 3Com may, in its sole discretion, refund to Customer the purchase price paid for the defective product. All products that are replaced will become the property of 3Com. Replacement products may be new or reconditioned.
3Com warrants any replaced or repaired product or part for ninety (90) days from shipment, or the remainder of the initial warranty period, whichever is longer.

SOFTWARE
3Com warrants that each software program licensed from it will perform in substantial conformance to its program specifications, for a period of ninety (90) days from the date of purchase from 3Com or its authorized reseller. 3Com warrants the media containing software against failure during the warranty period. No updates are provided. 3Com’s sole obligation under this express warranty shall be, at 3Com’s option and expense, to refund the purchase price paid by Customer for any defective software product, or to replace any defective media with software which substantially conforms to applicable 3Com published specifications. Customer assumes responsibility for the selection of the appropriate applications program and associated reference materials. 3Com makes no warranty or representation that its software products will meet Customer’s requirements or work in combination with any hardware or applications software products provided by third parties, that the operation of the software products will be uninterrupted or error free, or that all defects in the software products will be corrected. For any third party products listed in the 3Com software product documentation or specifications as being compatible, 3Com will make reasonable efforts to provide compatibility, except where the non-compatibility is caused by a “bug” or defect in the third party’s product or from use of the software product not in accordance with 3Com’s published specifications or user manual.

YEAR 2000 WARRANTY
In addition to the Hardware Warranty and Software Warranty stated above, 3Com warrants that each product sold or licensed to Customer on and after January 1, 1998 that is date sensitive will continue performing properly with regard to such date data on and after January 1, 2000, provided that all other products used by Customer in connection or combination with the 3Com product, including hardware, software, and firmware, accurately exchange date data with the 3Com product, with the exception of those products identified at 3Com’s Web site, http://www.3com.com/products/yr2000.html, as not meeting this standard. If it appears that any product that is stated to meet this standard does not perform properly with regard to such date data on and after January 1, 2000, and Customer notifies 3Com before the later of April 1, 2000, or ninety (90) days after purchase of the product from 3Com or its authorized reseller, 3Com shall, at its option and expense, provide a software update which would effect the proper performance of such product, repair such product, deliver to Customer an equivalent product to replace such product, or if none of the foregoing is feasible, refund to Customer the purchase price paid for such product.
Any software update or replaced or repaired product will carry a Year 2000 Warranty for ninety (90) days after purchase or until April 1, 2000, whichever is later.

OBTAINING WARRANTY SERVICE
Customer must contact a 3Com Corporate Service Center or an Authorized 3Com Service Center within the applicable warranty period to obtain warranty service authorization. Dated proof of purchase from 3Com or its authorized reseller may be required. Products returned to 3Com’s Corporate Service Center must be pre-authorized by 3Com with a Return Material Authorization (RMA) number marked on the outside of the package, and sent prepaid and packaged appropriately for safe shipment, and it is recommended that they be insured or sent by a method that provides for tracking of the package. The repaired or replaced item will be shipped to Customer, at 3Com’s expense, not later than thirty (30) days after 3Com receives the defective product.
Dead- or Defective-on-Arrival. In the event a product completely fails to function or exhibits a defect in materials or workmanship within the first forty-eight (48) hours of installation but no later than thirty (30) days after the date of purchase, and this is verified by 3Com, it will be considered dead-or defective-on-arrival (DOA) and a replacement shall be provided by advance replacement. The replacement product will normally be shipped not later than three (3) business days after 3Com's verification of the DOA product, but may be delayed due to export or import procedures. When an advance replacement is provided and Customer fails to return the original product to 3Com within fifteen (15) days after shipment of the replacement, 3Com will charge Customer for the replacement product, at list price.

3Com shall not be responsible for any software, firmware, information, or memory data of Customer contained in, stored on, or integrated with any products returned to 3Com for repair, whether under warranty or not.

WARRANTIES EXCLUSIVE

IF A 3COM PRODUCT DOES NOT OPERATE AS WARRANTED ABOVE, CUSTOMER'S SOLE REMEDY FOR BREACH OF THAT WARRANTY SHALL BE REPAIR, REPLACEMENT, OR REFUND OF THE PURCHASE PRICE PAID, AT 3COM'S OPTION. TO THE FULL EXTENT ALLOWED BY LAW, THE FOREGOING WARRANTIES AND REMEDIES ARE EXCLUSIVE AND ARE IN LIEU OF ALL OTHER WARRANTIES, TERMS, OR CONDITIONS, EXPRESS OR IMPLIED, EITHER IN FACT OR BY OPERATION OF LAW, STATUTORY OR OTHERWISE, INCLUDING WARRANTIES, TERMS, OR CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, SATISFACTORY QUALITY, CORRESPONDENCE WITH DESCRIPTION, AND NONINFRINGEMENT, ALL OF WHICH ARE EXPRESSLY DISCLAIMED. 3COM NEITHER ASSUMES NOR AUTHORIZES ANY OTHER PERSON TO ASSUME FOR IT ANY OTHER LIABILITY IN CONNECTION WITH THE SALE, INSTALLATION, MAINTENANCE OR USE OF ITS PRODUCTS.

3COM SHALL NOT BE LIABLE UNDER THIS WARRANTY IF ITS TESTING AND EXAMINATION DISCLOSE THAT THE ALLEGED DEFECT OR MALFUNCTION IN THE PRODUCT DOES NOT EXIST OR WAS CAUSED BY CUSTOMER'S OR ANY THIRD PERSON'S MISUSE, NEGLECT, IMPROPER INSTALLATION OR TESTING, UNAUTHORIZED ATTEMPTS TO OPEN, REPAIR OR MODIFY THE PRODUCT, OR ANY OTHER CAUSE BEYOND THE RANGE OF THE INTENDED USE, OR BY ACCIDENT, FIRE, LIGHTNING, OTHER HAZARDS, OR ACTS OF GOD.

LIMITATION OF LIABILITY

TO THE FULL EXTENT ALLOWED BY LAW, 3COM ALSO EXCLUDES FOR ITSELF AND ITS SUPPLIERS ANY LIABILITY, WHETHER BASED IN CONTRACT OR TORT (INCLUDING NEGLIGENCE), FOR INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY KIND, OR FOR LOSS OF REVENUE OR PROFITS, LOSS OF BUSINESS, LOSS OF INFORMATION OR DATA, OR OTHER FINANCIAL LOSS ARISING OUT OF OR IN CONNECTION WITH THE SALE, INSTALLATION, MAINTENANCE, USE, PERFORMANCE, FAILURE, OR INTERRUPTION OF ITS PRODUCTS, EVEN IF 3COM OR ITS AUTHORIZED RESELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, AND LIMITS ITS LIABILITY TO REPAIR, REPLACEMENT, OR REFUND OF THE PURCHASE PRICE PAID, AT 3COM'S OPTION. THIS DISCLAIMER OF LIABILITY FOR DAMAGES WILL NOT BE AFFECTED IF ANY REMEDY PROVIDED HEREIN SHALL FAIL OF ITS ESSENTIAL PURPOSE.

DISCLAIMER

Some countries, states, or provinces do not allow the exclusion or limitation of implied warranties or the limitation of incidental or consequential damages for certain products supplied to consumers, or the limitation of liability for personal injury, so the above limitations and exclusions may be limited in their application to you. When the implied warranties are not allowed to be excluded in their entirety, they will be limited to the duration of the applicable written warranty. This warranty gives you specific legal rights which may vary depending on local law.

GOVERNING LAW

3Com Corporation

FCC CLASS B STATEMENT

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

WARNING: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules, and the Canadian Department of Communications Equipment Standards entitled, “Digital Apparatus,” ICES-003. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from the one which the receiver is connected to.
- Consult the dealer or an experienced radio/TV technician for help.

The user may find the following booklet prepared by the Federal Communications Commission helpful:

The Interference Handbook

NOTE: In order to maintain compliance with the limits of a Class B digital device, 3Com requires that you use quality interface cables when connecting to this device. Changes or modifications not expressly approved by 3Com could void the user’s authority to operate this equipment. Refer to the manual for specifications on cabling types.

FCC DECLARATION OF CONFORMITY

We declare under our sole responsibility that the

Model: Description:
3C509B-TPO  EtherLink 10 ISA Network Interface Card with RJ-45 connector
3C509B-TPC  EtherLink 10 ISA Network Interface Card with RJ-45 connector and BNC connector
3C509B-TP  EtherLink 10 ISA Network Interface Card with RJ-45 connector and 15-pin AUI connector
3C509B-COMBO EtherLink 10 ISA Network Interface Card with RJ-45 connector, BNC connector, and 15-pin AUI connector

This equipment is in conformity with the following standards or other normative documents:

- ANSI C63.4-1992 Methods of Measurement
- Federal Communications Commission 47 CFR Part 15, subpart B
  15.107(e) Class B Conducted Limits
  15.109(g) Class B Radiated Emissions Limits

3Com Corporation, 5400 Bayfront Plaza, P.O. Box 58145, Santa Clara, CA 95052-8145
3Com End User Software License Agreement

IMPORTANT: Read Before Using This Product

YOU SHOULD CAREFULLY READ THE FOLLOWING TERMS AND CONDITIONS BEFORE USING THIS PRODUCT. IT CONTAINS SOFTWARE, THE USE OF WHICH IS LICENSED BY 3COM CORPORATION (“3COM”) TO ITS CUSTOMERS FOR THEIR USE ONLY AS SET FORTH BELOW. IF YOU DO NOT AGREE TO THE TERMS AND CONDITIONS OF THIS AGREEMENT, DO NOT USE THE SOFTWARE. USING ANY PART OF THE SOFTWARE INDICATES THAT YOU ACCEPT THESE TERMS.

LICENSE: 3Com grants you a nonexclusive license to use the accompanying software program(s) (the “Software”) subject to the terms and restrictions set forth in this License Agreement. You are not permitted to lease, rent, distribute or sublicense the Software or to use the Software in a time-sharing arrangement or in any other unauthorized manner. Further, no license is granted to you in the human readable code of the Software (source code). Except as provided below, this License Agreement does not grant you any rights to patents, copyrights, trade secrets, trademarks, or any other rights in respect to the Software.

The Software is licensed to be used on any workstation or any network server owned by or leased to you, provided that the Software is used only in connection with a 3Com adapter. You may reproduce and provide one (1) copy of the Software and supporting documentation for each such workstation or network server on which the Software is used as permitted hereunder. Otherwise, the Software and supporting documentation may be copied only as essential for backup or archive purposes in support of your use of the Software as permitted hereunder. You must reproduce and include all copyright notices and any other proprietary rights notices appearing on the Software and the supporting documentation on any copies that you make.

NO ASSIGNMENT; NO REVERSE ENGINEERING: You may not transfer or assign the Software and/or this License Agreement to another party without the prior written consent of 3Com. If such consent is given and you transfer or assign the Software and/or this License Agreement, then you must at the same time either transfer any copies of the Software as well as the supporting documentation to the same party or destroy any such materials not transferred. Except as set forth above, you may not transfer or assign the Software or your rights under this License Agreement.

Modification, reverse engineering, reverse compiling, or disassembly of the Software is expressly prohibited. However, if you are a European Community (“EC”) resident, information necessary to achieve interoperability of the Software with other programs within the meaning of the EC Directive on the Legal Protection of Computer Programs is available to you from 3Com upon written request.

EXPORT RESTRICTIONS: You agree that you will not export or re-export the Software or accompanying documentation (or any copies thereof) or any products utilizing the Software or such documentation in violation of any applicable laws or regulations of the United States and the country in which you obtained them.

TRADE SECRETS; TITLE: You acknowledge and agree that the structure, sequence and organization of the Software are the valuable trade secrets of 3Com and its suppliers. You agree to hold such trade secrets in confidence. You further acknowledge and agree that ownership of, and title to, the Software and all subsequent copies thereof regardless of the form or media are held by 3Com and its suppliers.

UNITED STATES GOVERNMENT LEGEND: All technical data and computer software are commercial in nature and developed solely at private expense. The Software is delivered as “Commercial Computer Software” as defined in DFARS 252.227-7014 (June 1995) or as a “commercial item” as defined in FAR 2.101(a) and as such is provided with only such rights as are provided in this License Agreement, which is 3Com’s standard commercial license for the Software. Technical data is provided with limited rights only as provided in DFAR 252.227-7014 (Nov. 1995) or FAR 52.227-14 (June 1987), whichever is applicable. You agree not to remove or deface any portion of any legend provided on any licensed program or documentation delivered to you under this License Agreement.

TERM AND TERMINATION: This license will expire fifty (50) years from the date that you first use the Software, if it is not earlier terminated. You may terminate it at any time by destroying the Software and documentation together with all copies and merged portions in any form. It will also terminate immediately if you fail to comply with any term or condition of this License Agreement. Upon such termination you agree to destroy the Software and documentation, together with all copies and merged portions in any form.

GOVERNING LAW: This License Agreement shall be governed by the laws of the State of California as such laws are applied to agreements entered into and to be performed entirely within California between residents of California and by the laws of the United States. You agree that the United Nations Convention on Contracts for the International Sale of Goods (1980) is hereby excluded in its entirety from application to this License Agreement.
LIMITED WARRANTY; LIMITATION OF LIABILITY: All warranties and limitations of liability applicable to the Software are as stated on the Limited Warranty Card or in the product manual, whether in paper or electronic form, accompanying the Software. Such warranties and limitations of liability are incorporated herein in their entirety by this reference.

SEVERABILITY: In the event any provision of this License Agreement is found to be invalid, illegal or unenforceable, the validity, legality and enforceability of any of the remaining provisions shall not in any way be affected or impaired and a valid, legal and enforceable provision of similar intent and economic impact shall be substituted therefor.

ENTIRE AGREEMENT: This License Agreement sets forth the entire understanding and agreement between you and 3Com, supersedes all prior agreements, whether written or oral, with respect to the Software, and may be amended only in a writing signed by both parties.

3Com is a registered trademark of 3Com Corporation.
