

XExtentsOfFontSet – obtain the maximum extents structure for a font set

```
XFontSetExtents *XExtentsOfFontSet(font_set)  
    XFontSet font_set;
```

font_set Specifies the font set.

The **XExtentsOfFontSet** function returns an **XFontSetExtents** structure for the fonts used by the Xmb and Xwc layers for the given font set.

The **XFontSetExtents** structure is owned by Xlib and should not be modified or freed by the client. It will be freed by a call to **XFreeFontSet** with the associated **XFontSet**. Until freed, its contents will not be modified by Xlib.

XCreateFontSet(3X11), **XFontsOfFontSet(3X11)**, **XFontSetExtents(3X11)**
