XSynchronize, XSetAfterFunction – enable or disable synchronization

```c
int (*XSynchronize(display, onoff))()
    Display *display;
    Bool onoff;
int (*XSetAfterFunction(display, procedure))()
    Display *display;
    int (*procedure)();
```

`display` Specifies the connection to the X server.
`procedure` Specifies the procedure to be called.
`onoff` Specifies a Boolean value that indicates whether to enable or disable synchronization.

The **XSynchronize** function returns the previous after function. If `onoff` is True, **XSynchronize** turns on synchronous behavior. If `onoff` is False, **XSynchronize** turns off synchronous behavior.

The specified procedure is called with only a display pointer. **XSetAfterFunction** returns the previous after function.

**XSetErrorHandler(3X11)**
