

## **XtCreateApplicationShell** – create top-level widget instance

**Widget** XtCreateApplicationShell(*name*, *widget\_class*, *args*, *num\_args*)

**String** *name*;

**WidgetClass** *widget\_class*;

**ArgList** *args*;

**Cardinal** *num\_args*;

*name* Specifies the name of the shell.

*args* Specifies the argument list to override any other resource specifications.

*num\_args* Specifies the number of arguments in the argument list.

**The procedure XtCreateApplicationShell** calls **XtAppCreateShell** with the *application* NULL, the application class passed to **XtInitialize**, and the default application context created by **XtInitialize**. This routine has been replaced by **XtAppCreateShell**.
