

XtGetActionList – obtain class action list

```
void XtGetActionList(widget_class, actions_return, num_actions_return)  
    WidgetClass widget_class;  
    XtActionList* actions_return;  
    Cardinal* num_actions_return;
```

widget_class Specifies the widget class whose actions are to be returned.

actions_return Returns the action list.

num_actions_return
 Returns the number of action procedures declared by the class.

XtGetActionList returns the action table defined by the specified widget class. This table does not include actions defined by the superclasses. If *widget_class* is not initialized, or is not **coreWidgetClass** or a subclass thereof, or if the class does not define any actions, **actions_return* will be NULL and **num_actions_return* will be zero. If **actions_return* is non-NULL the client is responsible for freeing the table using **XtFree** when it is no longer needed.
