1. **System requirements**

- 800MHz processor or higher
- at least 128MB system memory
- AGP or PCI Express slot
- CD-ROM drive
- Microsoft® Windows® 98SE/ME/2000/XP
- at least 60MB free hard disk drive space

**IMPORTANT**

Read the safety precautions in the documentation that came with your graphics card package.

---

**Card Installation**

For systems with an existing graphics card:

1. Shut down the system and unplug all power cables.
2. Open the PC power supply.
3. Remove the system fan to access the AGP slot.
4. If necessary, install the AGP bracket.
5. Place the graphics card in the AGP slot and secure it with the AGP bracket.
6. Secure the card with the system fan.
7. Reconnect all power cables and turn on the system.

For systems with no existing graphics card:

1. Open the PC power supply.
2. Place the graphics card in the AGP slot and secure it with the AGP bracket.
3. Secure the card with the system fan.
4. Reconnect all power cables and turn on the system.
