IBM PS/2 Model 95 XP 486 HMS General Checkout

1.0 General Checkout

Familiarize yourself with the model-specific *Hardware Maintenance Reference* pamphlet and the following information before starting with step 1.

The diagnostic tests are intended to test only IBM (*) marketed products. Non-IBM marketed products, prototype cards, or modified options can give false errors and invalid system responses.

Running Automatic Configuration

Warning: Running Automatic Configuration may alter customized configuration settings. Note the current settings using **View configuration**. If the configuration was customized, restore it to the customized settings after service is complete.

<u>Diagnosing Combined FRUs</u>: If an adapter or device consists of more than one FRU, an error code may be caused by any of the FRUs. Before replacing the adapter or device, remove the FRUs, one by one, to see if the symptoms change.

If you are instructed to replace either the processor board or the system board, and the first board that you replaced does not correct the problem, then replace the other board (processor or system) and reinstall the original board.

<u>Using Error Messages</u>: Use the error codes displayed on the screen to diagnose failures. If more than one error code is displayed, diagnose the first error code first. The cause of the first error code can cause false error codes to be displayed.

If there is not an error code on the screen, see if the error symptom is listed in the Symptom-To-FRU Index. If the symptom is not listed, diagnose the POST error code displayed on the information panel.

+---+ |001| +---+

- Power-off the system and all external devices.
- Verify the power-on password is inactive.
- Check all cables and power cords.
- Make sure there are no diskettes in the drives.
- Power-on all external devices.
- Power-on the system.

Note: If you get a POST error code, press the pause key (while the error code is on the screen). Write down any error codes that are displayed, then press F1 to continue. If the test stops and you cannot continue, go to "Symptom-to-FRU Index" in topic 14.0.

ARE ANY EXTERNAL SCSI DEVICES ATTACHED TO THE SYSTEM?

```
- 1
     +---+
    002
    +---+
    Go to Step 005.
- |
10031
DID THE POWER-GOOD LIGHT ON ALL OF THE EXTERNAL DEVICES COME ON?
Yes No
     - |
    +---+
    004
     Go to the external devices service pamphlet.
005
DID YOU RECEIVE A POST ERROR CODE?
Yes No
     - |
    +---+
    |006|
     Go to Step 014.
|007|
```

IBM PS/2 Model 95 XP 486 HMS General Checkout

```
IS THE FIRST POST ERROR CODE WITHIN THE RANGE OF 02080000 1901 TO 02410000
190I?
Yes No
     - |
    |008|
    +---+
     Go to Step 014.
10091
+---+
- Restart the system and verify that the "Enable" and "Disable" settings
 are correct. (For more information, go to "Enable and Disable Settings"
 in topic 5.0.) If you receive a warning on the screen regarding the
 "Keep" and "Remove" settings, follow the instructions on the screen
 before continuing.
DID YOU HAVE TO CORRECT ANY OF THE ENABLE AND DISABLE SETTINGS?
Yes No
    -
    +---+
   |010|
    Go to "Symptom-to-FRU Index" in topic 14.0. Before replacing any
     SCSI devices, verify there are no duplicate SCSI ID settings.
-
+---+
|011|
- Restart the system.
DID THE POST ERROR REMAIN?
Yes No
     - |
    +---+
    |012|
    +---+
    Continue with Step 014.
- !
|013|
Go to "Symptom-to-FRU Index" in topic 14.0.
014
- Press Ctrl+Alt+Del. When the curser moves to the upper right, press
 Ctrl+Alt+Ins and check for the following responses:

    One or two short beeps.
    Readable instructions or the Main Menu.

DID YOU RECEIVE THE RESPONSES LISTED PREVIOUSLY?
Yes No
     - |
    +---+
    |015|
    Go to "Symptom-to-FRU Index" in topic 14.0.
    If that does not correct the problem, go to "Undetermined Problem" in
     topic 4.0.
|016|
- If you are not at the Main Menu, follow the instructions on the screen
 to advance to the Main Menu, then press Ctrl+A and run system checkout.
- If the test stops and you cannot continue, go to "Undetermined Problem"
 in topic 4.0.
 Notes:
```

- 1. If the system has incorrect keyboard responses, go to "Keyboard" in topic 11.0.
- If the printer has incorrect responses, go to "Printer" in topic 8.0.
- 3. If the information panel has missing or distorted digits, go to "Symptom-to-FRU Index" in topic 14.0.
- 4. If the display has problems such as jittering, rolling, shifting, or being out-of-focus, go to "Display Self-Test" in topic 7.0.
- 5. If a minimum of 896KB of memory is not active, the diagnostic tests cannot be loaded.

IBM PS/2 Model 95 XP 486 HMS General Checkout

IS THE LIST OF INSTALLED DEVICES CORRECT?

Note: Memory, 487SX (option), and processor board cache (256KB) will not be listed.

Note: If the test stops and you cannot continue, replace the last device being tested.

 $(\ensuremath{^{\star}})$ IBM is a trademark of the International Business Machines Corporation.

IBM PS/2 Model 95 XP 486 HMS

Installed Devices List

2.0 Installed Devices List

If an adapter or device is missing from the list, you might have one of the following conditions:

The fixed disk drive (hard disk drive) (or Reference Diskette) does not contain the module of code required to support that device.

The missing device is an unrecognizable adapter.

The missing device requires an additional diskette or service manual.

The missing device is defective.

An adapter is defective.

Subtopics

- 2.1 Device Type
- 2.2 SCSI Devices
- 2.3 Non-SCSI Devices

IBM PS/2 Model 95 XP 486 HMS Device Type

2.1 Device Type

Run Automatic Configuration (see "Running Automatic Configuration" in topic 1.0 before continuing) and determine which type of device, SCSI or non-SCSI, is missing from the Installed Devices List (in Advanced Diagnostics), then continue with the following steps. (If SCSI and non-SCSI devices both are missing, go to "Undetermined Problem" in topic 4.0.)

IBM PS/2 Model 95 XP 486 HMS SCSI Devices

2.2 SCSI Devices

The adapter supporting the missing device may be defective. If more than one SCSI adapter is installed, isolate them one at a time.

- Power-off the system and disconnect any internal and external SCSI devices from the SCSI adapter (except the default hard disk drive).
- 2. Terminate the adapter, as required.
- 3. Power-on the system and run **Automatic Configuration** (see "Running Automatic Configuration" in topic 1.0 before continuing). If the adapter is not on the Installed Devices List (in Advanced Diagnostics), the adapter is defective. If the adapter is on the list, run the adapter diagnostic tests.
- If the adapter fails the tests, replace the cable. If the adapter passes the tests, a different adapter may be defective.
- 5. Reconnect the devices to the adapter, then terminate the adapter, as required.
- 6. Go to "Undetermined Problem" in topic 4.0 to find the problem.

IBM PS/2 Model 95 XP 486 HMS Non-SCSI Devices

2.3 Non-SCSI Devices

Replace the missing device.

Note: If the number of diskette drives shown on the list is incorrect, an error can occur during the tests. Restart the system, select View Configuration from the Set Configuration menu and verify that the drive information is correct, then continue testing.

IBM PS/2 Model 95 XP 486 HMS Power-On Password

3.0 Power-On Password

- To service a system with a power-on password:

 1. Move the system board jumper J16, to connect the center pin and the pin on the opposite end of the connector (see the figure on page 12.0).
- 2. Power-on the system.

The system detects the change and removes the password. Do not move the jumper back to its original position.

IBM PS/2 Model 95 XP 486 HMS Undetermined Problem

4.0 Undetermined Problem

You are here because the diagnostic tests did not identify which adapter or device failed. Do not isolate FRUs that are known to be good.

If the power-on light is not on, verify (with power off) that the voltage-select switch is in the correct position. Then check the power supply voltages. If the voltages are not correct, replace the power supply. If the voltages and switch setting are correct, do the following:

1. Power-off the system.

2. Remove or disconnect one of the following:

Note: Minimum operating requirements are one pair of 1MB kits (type 1 systems) or one 2MB kit (type 2 systems), the processor board, and the default drive 6.

Non-IBM devices
Modem, printer, mouse, or other device
Any adapter (except the Processor Board)
Processor board cache option (256KB)
487SX math coprocessor option
Hard-disk or diskette drive
Memory-module kits.

- 3. Power-on the system.
- If the problem remains, repeat steps 1 through 3 until you find the failing adapter or device.
- If all adapters and devices have been removed and the problem remains, suspect the system board, processor board, then the power supply.

IBM PS/2 Model 95 XP 486 HMS Enable and Disable Settings

5.0 Enable and Disable Settings

To check the settings, select **Set and View SCSI Device Configuration** from the Set Configuration menu and see if any Presence Error Reporting devices are listed (not all devices report). Set devices connected to the system to "Enabled." Set devices listed but *not connected* to "Disabled." Press F5 to make changes then press F10 to save the changes.

For more information, see "Presence Test" in the ${\it Diagnostic}$ ${\it Information}$ for ${\it Micro}$ ${\it Channel}$ ${\it Computers}$ pamphlet.

IBM PS/2 Model 95 XP 486 HMS Power Supply Voltages / Fans

6.0 Power Supply Voltages / Fans

While shorting pins 1 and 2 together, read the voltages on the other pins. If the voltages are incorrect, replace the power supply.

V dc Minimum	V dc Maximum	-Lead Pin	+Lead Pin	+ !
	; 	İ		
+3.7	+ 6.2	5	3	
+9.0	+15.0	5	4	
- 9.0	- 15.0	5	7	- 1
+3.7	+ 6.2	В	D	- 1
+9.0	+15.0	В	A	i
İ	i	İ		İ

PICTURE 2

In addition to the power supply fan, some systems require a fan on the system access cover. Excess heat will cause intermittent failures. If the power supply fan failed, replace the power supply. To determine if the system access cover fan failed, do the following:

- 1. Check for 12 V dc (± 1.4 V dc) at the two fan cable assembly pins on the system base.
 - If the voltage is correct, check for 1300 ohms ($\pm 10\%$) resistance between the fan terminals.
 - If the resistance is incorrect, replace the fan.
 - If the resistance is correct, check the spring clip connections. If the connections are good, there is not a fan problem.
- 2. If the voltage is incorrect, unplug the fan cable assembly from connector J28 on the system board and check the cable assembly for continuity (see the figure on page 12.0).
 - If the cable has continuity, replace the system board.
 - If the cable does not have continuity, replace it.

IBM PS/2 Model 95 XP 486 HMS Display Self-Test

- 7.0 Display Self-Test
- 1. Power-off the system unit and display.
- Disconnect the display signal cable.
 Power-on the display.
- 4. Turn the contrast to its maximum position.
- 5. Turn the brightness control to the center detent position.

The screen should be white with a black margin, as described below (shading may occur near the edges).

8503, 8512, 8513, 8514, 8515: 2--20 mm (0.08--0.79 in.) wide on one or both sides.

8506: 2-50 mm (0.08-1.97 in.) wide on the top, or bottom, or both. **8507, 8508:** 2-20 mm (0.08-0.79 in.) wide on the top, or bottom, or both.

If the screen does not meet the test specifications, replace the display. If it meets the test specifications, replace the display adapter.

Note: Certain adapter failures can cause video problems. Before replacing FRUs, remove any option adapters to see if the problem disappears.

IBM PS/2 Model 95 XP 486 HMS Printer

8.0 Printer

- 1. Make sure the printer is properly connected and powered-on. 2. Run the printer self-test.

If the printer self-test does not run correctly, the problem is in the printer. Refer to the printer service manual.

If the printer self-test runs correctly, install a wrap plug on the parallel port and run the advanced diagnostic tests to determine which FRU $\,$ failed.

If the advanced diagnostic tests do not detect a failure, replace the printer cable. If the problem remains, replace the system board.

IBM PS/2 Model 95 XP 486 HMS

9.0 IML / IPL

You are here because you have an Initial Machine Loading (IML) or an Initial Program Loading (IPL) problem resulting in one of the following symptoms:

You have an I999XXXX error

The system was powered-on without a POST error, but the operating system does not work or the system starts up in BASIC.

Verify that the system has a valid Selectable Startup Sequence. To do this:

- Start the system from the Reference Diskette and select Set Features from the Main Menu.
- Select Set Startup Sequence and see if the default hard disk drive (drive 6) is in the startup sequence. If you receive an error message, follow the instructions on the screen, then return here.
- 3. If the default drive is in the startup sequence, exit from the screen and the Main Menu, then go to the next step. If the default drive is not in the startup sequence, follow the instructions on the screen, then continue with the next step.
- 4. Power-off the system, remove the Reference Diskette, then power-on the system. If the "F1" (Insert Diskette) icon appears on the screen, continue with the next step. If the "Not OK" icon appears on the screen, go to step 6.
- 5. Change the startup sequence to include a device that has an operating system, then go to step 8. The system didn't detect an operating system on any of the devices in the startup sequence.
- Restart the system from the Reference Diskette. Select Update System Programs from the Main Menu and wait for the program to complete running.
- 7. Power-off the system, remove the Reference Diskette and continue with the next step.
- 8. Power-on the system, check for the normal power-up sequence and then Run the Advanced Diagnostic tests. If the problem still exists, go back to the "Symptom-to-FRU Index" in topic 14.0.

Note: If the startup sequence was customized, restore it to the customized settings after service is complete.

IBM PS/2 Model 95 XP 486 HMS Processor Board

10.0 Processor Board

You are here because the system has the following symptoms:
No beep
No message on the display
Fan runs
Power-on light is on.

Remove the adapters (except the processor board), the memory-module kits, and the processor-board cache option (256KB) one at a time, until you find the failing adapter. If all adapters have been removed and the problem remains, replace the processor board. If the problem still remains, replace the system board.

IBM PS/2 Model 95 XP 486 HMS Keyboard

11.0 Keyboard

- Power-off the system.
 Disconnect the cable from the keyboard.
 Power-on the system and check the connector for the voltages shown. All voltages are ± 5%.

PICTURE 3

If the voltages are correct, replace the keyboard.

If the voltages are not correct, suspect the keyboard cable, then the system board.

IBM PS/2 Model 95 XP 486 HMS Memory

12.0 Memory

Use the system board figure below to locate the memory-module kit connectors $\mbox{\rm B1}$ to $\mbox{\rm A4}\,.$

PICTURE 4

Note: Power-off the system before removing or replacing memory.

Type 1 systems run only interleaved memory configurations.

Type 2 systems run interleaved, noninterleaved, or a combination of both configurations. The processor board that is installed determines which type of memory (type 1 or type 2) is supported. Use the FRU number on the processor board or the submodel code from **Display Revision Levels** to determine which processor board is installed.

To view the submodel code, go to the Main Menu and select **Display Revision** Levels. Make note of the submodel code displayed on the screen.

The following figure converts the submodel code (and FRU number) to the system memory type.

Submodel Code	FRU Number	System Memory Type
14	64F0201	Type 1
16	64F0198	Type 1
2C	92F0065	Type 1
2E	92F0049	Type 1
2A	92F0048	Type 1
58	92F0079	Type 2
5A	92F0079	Type 2
	1	

Subtopics

- 12.1 Memory (Type 1 Systems)
- 12.2 Memory (Type 2 Systems)

IBM PS/2 Model 95 XP 486 HMS Memory (Type 1 Systems)

12.1 Memory (Type 1 Systems)

Notes:

- Only interleaved memory is supported. Interleaved memory-module kits operate in pairs (for example A1 and B1, A2 and B2). Each pair must be the same memory size and speed. Total system memory capacity is 64MB. Minimum operating requirement is one pair of 1MB kits.
- 2. Running customer diagnostic tests will deallocate defective memory. After you replace defective memory, run the advanced diagnostic memory test or the replacement memory might not be recognized.

Run the advanced memory diagnostic test. If the test does not indicate which memory-module kit failed, continue with the following process.

Note: If a screen message appears asking if you have replaced a specific memory module, suspect that it is the failing module.

Subtopics
12.1.1 Finding the Failing Memory

IBM PS/2 Model 95 XP 486 HMS Finding the Failing Memory

12.1.1 Finding the Failing Memory

Test the kits by removing, testing and replacing them, one at a time (within each matched pair), until you find the kit that caused the failure. Reinstall each kit in the same connector from which it was removed. If the problem remains, replace the processor board.

IBM PS/2 Model 95 XP 486 HMS Memory (Type 2 Systems)

12.2 Memory (Type 2 Systems)

Notes:

- 1. Interleaved and noninterleaved memory is supported. If the kits are installed in matched pairs (for example A1 and B1, A2 and B2) of the same memory size and speed, the kits will automatically run in interleaved mode. Any other configuration is supported, but will run in the less-efficient noninterleaved mode. Total system memory capacity is 64MB. Minimum operating requirements is one 2MB kit.
- Running customer diagnostics will deallocate defective memory. After you replace defective memory, run the advanced diagnostic memory test or the replacement memory might not be recognized.

Run the advanced memory diagnostic test. If the test does not indicate which memory-module kit failed, continue with the following process.

Note: If a screen message appears asking if you have replaced a specific memory module, suspect that it is the failing module.

Subtopics

12.2.1 Finding the Failing Memory

IBM PS/2 Model 95 XP 486 HMS Finding the Failing Memory

12.2.1 Finding the Failing Memory

Test the kits by removing, testing and replacing them, one at a time (within each matched pair), until you find the kit that caused the failure. Reinstall each kit in the same connector from which it was removed. If the problem remains, replace the processor board.

Note: If the kits are installed in a noninterleaved configuration, you can remove and replace them in any order.

IBM PS/2 Model 95 XP 486 HMS

Processor Board and Reference Diskette Matrix

13.0 Processor Board and Reference Diskette Matrix

There are two types of Model 95 Reference Diskettes (labeled 1 or 2). The processor board installed in the system determines which one to use. You can use any of the following methods to identify the type of processor board installed and the Reference Diskette Required:

 $\underline{\mathtt{FRU}\ \mathtt{Number}}\colon$ Read the FRU number printed near the card-edge of the processor board.

Use the following matrix to identify which processor board is installed and which Reference Diskette is required.

Submodel Code Number 	Processor Board FRU Number and Description	Upgrade Label Number 	Reference Diskette Type Required
2E	92F0049 486/20		1
2A	64F0201 486/25	P1	1
14	64F0198 486/33	P2	1
16	92F0048 486/50	P3	1
2C	92F0065 487SX/20	P4	1
58	92F0079 486SX/25	P5	2
5A *	92F0079 486SX/25	P6 *	2
Ì	İ	İ	İ

^{*} Also requires a 487SX processor (FRU 92F0100).

Note: For a layout of the processor board, see "Processor Board" in the ${\it Hardware\ Maintenance\ Reference}$ manual.

(**) 486, 487, and SX are trademarks of the Intel Corporation.

IBM PS/2 Model 95 XP 486 HMS Symptom-to-FRU Index

14.0 Symptom-to-FRU Index

Error symptoms and the FRUs that might be responsible for the failure are listed in the "Symptom-To-FRU index." The most-likely failing FRU is listed first. If you are unable to correct the problem using this index, go to "Undetermined Problem" in topic 4.0.

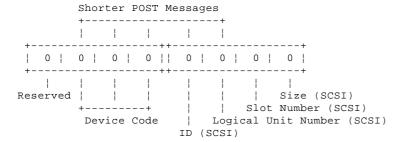

If the system displays an error message and gives an incorrect audio response, start with the FRUs listed for that error message. An "X" in an error message can be any number.

Note: If an error message is not listed, there is a device installed that requires an additional diskette or service manual. Refer to the diskette or service manual for that device.

How to Read POST Error Messages

POST error messages are displayed on the screen as three, four, five, or eight digits. The error messages that can be displayed as shorter POST messages are highlighted in this index. Some digits will represent different information for SCSI errors versus non-SCSI errors.

The following figure shows which digits display the shorter POST error messages. The figure also defines the SCSI information in an eight-digit error message.

All SCSI devices must be set to a different SCSI ID. Duplicate SCSI ID settings can generate a false error message. Use the SCSI ID to determine whether the error message is coming from an internal or an external device.

Note: If you are instructed to replace either the processor board or the system board, and the first board that you replaced does not correct the problem, then replace the other board (processor or system) and reinstall the original board.

Subtopics

- 14.1 No-Beep Symptoms
- 14.2 Beep Symptoms
- 14.3 SCSI Tape Drive Symptoms
- 14.4 Miscellaneous Symptoms
- 14.5 Numeric Error Codes

14.1 No-Beep Symptoms

Symptom/Error	FRU / Action
No beep, power-on light does not light, and fan does not run. (See "Undetermined Problem" in topic 4.0 before replacing any FRUs.)	 Power Supply Processor Board System Board Any device or adapter
No beep, fan runs, and a 000215XX on the information panel. (See "Memory" in topic 12.0 before replacing any FRUs.)	 System Board Memory Processor Board System Board
No beep, fan runs, and a 000 171 XX on the information panel.	 System Board
No beep, fan runs, power- on light lights, system stops during POST with a message on the display. (See "Undetermined Problem" in topic 4.0 before replacing any FRUs.)	 System Board Processor Board Power Supply
No beep, fan runs, power- on light lights, system stops during POST with no message on the display, or an unreadable display. (See "Processor Board" in topic 10.0 before replacing any FRUs.)	Processor Board System Board Power Supply
No beep, fan runs, power- on light lights, memory count and blinking curser continuously loops.	 Processor Board Cache
No beep and system is otherwise functional (See "Undetermined Problem" in topic 4.0 before replacing any FRUs.)	 Speaker System Board

14.2 Beep Symptoms

Symptom/Error	FRU / Action
Operating system does not work, or the system starts up in BASIC. (See "IML / IPL" in topic 9.0 before replacing any FRUs.)	Default SCSI Hard Disk Drive
One long and two short beeps (See "Display Self-Test" in topic 7.0 before replacing any FRUs.)	Display Adapter System Board Display
One or two short beeps and a blank or unreadable display or a blinking curser (See "Display Self-Test" in topic 7.0 before replacing any FRUs.)	 Display Adapter System Board Display
Continuous beep (See "Undetermined Problem" in topic 4.0 before replacing any FRUs.)	Power Supply System Board
Repeating short beeps (See "Undetermined Problem" in topic 4.0 before replacing any FRUs.)	 Power Supply System Board Keyboard (stuck key)

IBM PS/2 Model 95 XP 486 HMS SCSI Tape Drive Symptoms

14.3 SCSI Tape Drive Symptoms

+	FRU / Action
The tape is automatically ejected from the Drive. 	Tape Cassette Drive
The tape sticks or breaks in the drive. (Verify that the tapes used meet ANSI standard X3B5.)	Tape Cassette

14.4 Miscellaneous Symptoms

Symptom/Error	FRU / Action +
Program loads from the hard disk drive, or a non-system or disk error (with the Reference Diskette in drive A).	 Diskette Drive System Board Power Supply
Information-Panel Display fails	 System Board Information-Panel Assembly Power Supply
Display screen changes colors	 Display
Power-on light does not light and fan runs	 Information-Panel Assembly System Board Power Supply
IML image has been updated and the insert-diskette icon appears on display and a 199900XX on the information panel.	 Verify an operating system has been loaded onto the default hard disk drive.
Memory count displayed does not match memory installed. (See "Memory" in topic 12.0 before replacing any FRUs.)	 System Board Memory
One or more keys do not work and system is otherwise functional	 Keyboard Keyboard Cable System Board
Intermittent Failures (See "Undetermined Problem" in topic 4.0 before replacing any FRUs.)	 Power Supply System Fans Any device or adapter
System will not power-off	 Information-Panel Assembly System Board Power Supply

IBM PS/2 Model 95 XP 486 HMS How To Use This Parts Catalog

15.0 How To Use This Parts Catalog

INDEX REFERENCE NUMBERS: Refer to the illustrations for index reference numbers listed in the left margin of the parts listing.

SIMILAR ASSEMBLIES: If two assemblies contain a majority of identical parts, they are broken down on the same list. Parts peculiar to one or the other of the assemblies are listed separately and identified by description.

 ${\tt AR\colon}$ (As Required) indicates that the quantity is not the same for all machines.

 ${\bf R}\colon$ (Restricted) indicates that the part has a restricted availability.

INDENTURE: The indenture is marked by a series of dots located before the parts description. The indenture indicates the relationship of a part to the next higher assembly. For example:

Indenture Relationship of Parts

(No o	dot)	Main Assembly
(One	dot)	Detail parts of a main assembly
(One	dot)	Subassembly of the main assembly
(Two	dot)	Detail part of a one-dot
		subassembly
(Two	dot)	Subassembly of a one-dot
		subassembly
