

SUSE LINUX DATABASE SERVER WITH IBM DB2 UNIVERSAL DATABASE

SuSE Linux Enterprise Server optimized for IBM DB2 Universal Database

SuSE Linux Enterprise Server is the cross-architecture operating system solution for companywide IT infrastructures. It combines the advantages of SuSE Linux – speed, security, cost, efficiency, and high quality – with a professional and proven database system. On an optimized operating system basis, SuSE Linux Database Server offers security and stability for DB2 Universal Database and all relevant server services.

IBM DB2 Universal Database

IBM DB2 Universal Database (UDB) is the first web-capable multimedia administration system for relational databases that is powerful enough to meet the requirements of large enterprises and flexible enough for the smooth deployment in small and medium-scale enterprises.

SUSE LINUX GROUPWARE SERVER WITH LOTUS DOMINO R5

SuSE Linux and Lotus Domino – The professional synergy

In networks, SuSE Linux excels with reliability and speed advantages, both as an operating system and as a server platform. Lotus Domino with Lotus Notes is the leading software solution for electronic teamwork with all features for messaging, groupware, and Internet. Lotus Domino on SuSE Linux makes the implementation of flexible infrastructures for web applications as easy as never before – precisely tuned to individual network and business requirements.

Unbeatable price/performance

SuSE Linux Enterprise Platform, Lotus Domino Application Server, Notes clients and comprehensive documentation package at an attractive bundle price.

Business Solutions

SUSE LINUX – EXPERT SOLUTIONS FOR YOUR DAILY BUSINESS

Linux is the stable, secure and uniquely flexible IT-solution of the future. SuSE Linux is the leading provider of first rate Linux solutions, that are tuned to your individual requirements – see for yourself.

- SuSE Linux Firewall on CD
- SuSE Linux Enterprise Server 7
- SuSE Linux eMail Server III
- SuSE Linux Connectivity Server
- SuSE Linux Database Server
- SuSE Linux Groupware Server

SUSE LINUX FIREWALL ON CD

With the Firewall Administration System, FAS, configuring your firewall is easy. Each screen is accompanied with an informative help system to guide you quickly through the firewall setup. Once the setup is complete, you store your configuration on a floppy disk and you are ready to deploy your SuSE Linux Firewall.

Secure – This Firewall runs directly from a “live” CD

The SuSE Linux Firewall runs directly from the “live” read-only Firewall CD. This ensures extra protection against potential intruders on your system. The “live” CD makes it virtually impossible to manipulate the firewall software. In fact, with the SuSE Linux Firewall on CD there is no need even to have a hard disk in your hardware! Everything runs directly from the floppy disk and CD, offering both greater security and reliability.

Maintenance – We are here to help

With your purchase of SuSE Linux Firewall on CD you receive one year of product maintenance, giving you access to a wide range of services to keep your system up-to-date and secure.

Features of the SuSE Linux Firewall on CD product maintenance

- Access to a priority webserver to download software updates
- Detailed documentation of software patches and security updates
- Automatic notification of new software packages and updates
- Option to purchase SuSE Premier Software Support

UPDATE SERVICE – RECEIVE THE LATEST “LIVE” FIREWALL CD BY MAIL

Because the firewall runs directly from the read-only “live” CD, SuSE Linux sends you the latest bug fixes and security updates pre-installed and configured on a new “live” Firewall CD, free of charge! Since all of your personal firewall configurations are stored on a floppy disk, you simply need to replace the “live” Firewall CD and reboot the system.

Features of the included Update Service

- Delivery of an update CD when necessary
- Installation support for all software updates

SUSE LINUX ENTERPRISE SERVER 7

Convenience – Designed with business users in mind

This exceptionally stable platform is highly suitable for e-mail, Internet, and application services, ERP systems and for the implementation of file and print services in heterogeneous networks. Because of its powerful hardware support and extremely high level of reliability, availability and scalability, it is the ideal medium for consolidating complex server structures – from departmental and Internet/intranet servers to application servers for mission-critical applications.

Solid foundation – Built to last

A professional server operating environment should not only be stable and secure; it should also be characterized by extended release cycles to enable longer roll out plans, and accompanied by additional support and services. SuSE Linux is committed to supporting and maintaining SuSE Linux Enterprise Server 7 for a minimum of two years. Together with an extensive range of services, you can count on SuSE Linux to deliver the very best Linux solutions.

Certification – Our seal of approval

SuSE Linux works very closely with hardware and software partners such as Compaq, Fujitsu Siemens, IBM, Oracle, and SAP. As a result SuSE Linux is certified by our partners – this gives you the confidence of full compatibility.

Maintenance – We are here to help

Your purchase of the SuSE Linux Enterprise Server 7 includes one year of product maintenance, designed to facilitate the deployment of Linux in the business sector and giving you access to a wide range of services to keep your system up-to-date and secure.

Features of the SuSE Linux Enterprise Server product maintenance

- Access to a priority webserver to download software updates
- Detailed documentation of software patches and security updates
- Automatic notification of new software packages and updates
- Option to purchase SuSE Premier Software Support

SERVICE – STAY UP-TO-DATE WITH THE LATEST SOFTWARE

The optional, active update service for SuSE Linux Enterprise Server takes the included online maintenance one step further. Our offer includes the following services that will increase your convenience and facilitate your administration.

Features of the SuSE Linux Enterprise Server Update Service

- Delivery of an update CD four times a year
- Printed documentation of all bugfixes and security updates
- Installation support for all software updates

SUSE LINUX eMAIL SERVER III

Looks familiar – Built with standards in mind

The SuSE Linux eMail Server III is based on SuSE's successful Enterprise Server Platform. It gives you the power and flexibility to integrate e-mail services in a heterogeneous environment. The SuSE Linux eMail Server III enables you to use various e-mail clients that support Internet standards like IMAP, POP3 and others, allowing you to use whatever suits your needs best.

Fully compatible – Works with Windows

It's easy to integrate the SuSE Linux eMail Server III with existing Windows clients using Microsoft Outlook, Outlook Express, Netscape Messenger and other popular Windows or Macintosh e-mail clients.

Easily accessible – Web-mail from anywhere

Included with the SuSE Linux eMail Server III is a high quality, integrated web based mail client. Your users are always a web-browser away from their e-mail; more importantly you can configure all web based e-mail so that it can be viewed through a secure SSL connection, protecting your most vital business communications.

Experience the freedom – No per client licences

The SuSE Linux eMail Server III lets you break free from the costly licensing schemes that come with other e-mail software. With the SuSE Linux eMail Server III you may use an UNLIMITED number of e-mail accounts and an UNLIMITED number of client access licences.

GET ORGANIZED – KEEP UP-TO-DATE WITH THE SCHEDULER

You can now store all your appointments, schedules, and to-do-lists with the new integrated scheduler, based on Skyrix, with the web-based email client included with the SuSE Linux eMail Server III. In addition, all scheduling data can be imported and exported from palm based devices.

SUSE LINUX CONNECTIVITY SERVER

The optimized network solution for heterogeneous networks

SuSE Linux Connectivity Server is the turnkey solution for connecting Linux, Windows, and Apple clients to the Internet – and more!

High flexibility – Great services

SuSE Linux Connectivity Server renders the establishment and operation of small networks or home offices with Internet connections child's play. Simply install the system with the well-known graphical installation tool YaST2. Existing Windows, Apple, or Linux PCs are immediately able to access the Internet or jointly use file and print services. Our extensive Maintenance and Update Services are of course available for all SuSE Linux Business Products.
