

## Powering your business ... on demand

xSeries 225

xSeries 450

#### **Highlights**

- High-performance, scalable xSeries servers, such as the new IBM @server xSeries 445, feature outstanding levels of availability, scalability and transaction performance.
- Rack-optimized xSeries servers, such as the new IBM @server xSeries 382, help solve the data center space dilemma with outstanding performance and manageability in compact designs.
- Universal xSeries servers deliver file, print, application and mail serving solutions for small businesses or distributed departmental computing.

#### On demand ready

Becoming an on demand business means finding new ways to grow, adapt and respond in a dynamic business environment while managing costs. IBM @server<sup>TM</sup> xSeries® systems provide outstanding availability and systems management capabilities that help better manage and provision your computing resources, for a responsive IT environment that can grow with your business. Just the capabilities you need in today's on demand world.

#### **High-performance hardware**

The IBM @server product line features advanced servers that help lower costs, speed innovation and solve problems rapidly with improved efficiency. xSeries servers, a member of the IBM @server product family, provide Intel® processor-based server solutions that feature hands-off reliability through mainframe-inspired technologies and smart management tools.

#### Superior design, diverse offerings

xSeries servers range from affordable, workgroup systems to enterprise-class systems. Built on IBM Enterprise X-Architecture™ technology, a blue-print for building IBM mainframe muscle into Intel processor-based systems, xSeries servers deliver

revolutionary advancements to I/O, memory and processors, and a payas-you-grow approach to Intel 32-and 64-bit xSeries systems. Pay as you grow allows businesses to pay for what they need today, reducing acquisition costs, while also helping protect their IT investment.

#### Smart systems management

IBM Director systems management software provides comprehensive systems management, helping reduce the risk of downtime and lower IT costs. While IBM Director takes predictive and proactive actions to keep systems running, you're free to concentrate on important business matters such as market opportunities or responding to customers.

#### BladeCenter solutions

Tackle your server management challenges with IBM @server
BladeCenter. BladeCenter's modular design gathers computing resources into cost-effective, high-density enclosures that support hot-swappable, high-performance blade servers.
BladeCenter offers the performance and manageability of IBM rack-optimized platforms—at twice the density of most of today's Intel processor-based 1U servers.

### IBM @server xSeries systems

BladeCenter's open application architecture and industry-standard solutions provide greater flexibility, while innovative modular technology allows you to "pay as you grow."

#### **Clustering solution**

IBM @server Cluster 1350, IBM's industry-leading Linux cluster solution, now includes BladeCenter to provide both outstanding performance and double the density of traditional Intel processor-based 1U clusters. The Cluster 1350 combines the power of BladeCenter and other xSeries rack-optimized servers with IBM Cluster Systems Management for Linux software, IBM storage products, leading third-party networking components and a single point of contact for warranty service for all cluster components—creating powerful, reliable, flexible solutions for highperformance computing and commercial application environments. Visit ibm.com/servers/eserver/ clusters/ for more information on the Cluster 1350 solution.

#### Microsoft solutions

xSeries works closely with Microsoft so that xSeries servers provide outstanding performance and robust functionality running the different versions of the Windows operating system. xSeries supports a broad range of offers from select products preloaded with the Windows operating system for customers who desire one-stop shopping to distributing the Datacenter Edition for customers demanding scalability and reliability.

#### **Linux solutions**

IBM works closely with the leading Linux distribution companies—
Red Hat, Inc., SuSE Linux AG and Turbolinux, Inc.—to offer tested and validated configurations for xSeries servers. This helps deliver outstanding xSeries performance and functionality. Also, IBM fully supports United Linux. The range of Linux offerings available on xSeries servers gives you the flexibility to choose the optimum Linux implementation for your unique requirements.

#### **Growing storage demands**

Managing storage resources has become one of the most strategic issues today. Companies are moving fast to reduce backup windows, increase data availability, increase security and boost IT productivity to support today's round-the-clock, e-commerce driven applications.

From disk, tape, storage area networks, network attached storage, software and services to qualified IBM TotalStorage Solution Centers and IBM Business Partners, IBM offers a broad storage solutions portfolio. The TotalStorage® product portfolio provides scalable, open, integrated solutions for your storage and application needs.

#### Affordable xSeries solutions

xSeries systems are designed to match nearly any application workload environment, from the entry-level, uni-processor x205 to the enterprise-powered up to 32-way x445. Visit **ibm.com**/eserver/xseries for more information on the high-performance line of xSeries servers.

"xSeries servers offer a convincing technological and cost-effective server concept that is optimally suited to our medium-sized clientele. xSeries systems offer us a fully flexible, highly available and extremely cost-saving IT basis, even for meeting increasing demands."

— Frank Schäfer, IWKA InformationsSysteme GmbH
