1 Fingerprint Console Command Description

The fingerprint console must be run from the Fingerprint Software installation folder. The basic syntax is `FPRCONSOLE [USER | SETTINGS]`. The `USER` or `SETTINGS` command specifies what set of operation will be used. The full command is then e.g. "`fprconsole user add TestUser /FORCED`". When the command is not known or not all parameters are specified short command list is shown together with the parameters.

1.1 User specific commands

To enroll or edit users the `USER` section is used. When the current user does not have administrator's rights the console behavior depends on the security mode of the FS.

Convenient mode: `ADD`, `EDIT` and `DELETE` commands are possible for standard user. However the user can modify only his own passport (enrolled with his username).

Secure mode: no commands are allowed.

Syntax: `FPRCONSOLE USER <command>`

<command> is one of the following commands: `ADD`, `EDIT`, `DELETE`, `LIST`, `IMPORT`, `EXPORT`.

1.1.1 Enroll new user

Syntax: `ADD [<username> [| <domain>\<username>]] [/FORCED]`

The `/FORCED` flag will disable the cancel button of the wizard so the enrollment must be then successfully finished. If the user name is not specified then the current user name is used.

Example:

```
fprconsole add domain0\testuser
fprconsole add testuser
fprconsole add testuser /FORCED
```

1.1.2 Edit enrolled user

Syntax: `EDIT [<username> [| <domain>\<username>]]`

If the user name is not specified then the current user name is used.

Example:

```
fprconsole edit domain0\testuser
fprconsole edit testuser
```

Note: The edited user must verify his fingerprint first

1.1.3 Delete a user

Syntax: `DELETE [<username> [| <domain>\<username> | /ALL]]`

The `/ALL` flag will delete all users enrolled on this computer. If the user name is not specified then the current user name is used.

Example:

```
fprconsole delete domain0\testuser  
fprconsole delete testuser  
fprconsole delete /ALL
```

1.1.4 Enumerate enrolled users

Syntax: LIST

1.1.5 Export enrolled user to a file

This command will export an enrolled user to a file on the HDD. The user then can be imported using the IMPORT command on other computer or on the same computer if the user is deleted. The data are encrypted using Blowfish algorithm using the specified password.

Syntax: EXPORT <username> [| <domain>\<username>] <file> <password>

1.1.6 Import enrolled user

Syntax: IMPORT <file> <password>

The import will import the user from the specified file. The data are encrypted using Blowfish algorithm using the specified password.

WARNING: If the user in the file is already enrolled on the same computer using the same fingerprints then it is not guaranteed which user will have a precedence in the identification operation.

1.2 Global settings commands

The global settings of the Fingerprint Software can be changed by the SETTINGS section. All the commands in this section need administrator's rights.

Syntax: FPRCONSOLE SETTINGS <command>

Where <command> is one of the following commands: SECUREMODE, LOGON, CAD, TBX, SS0.

1.2.1 Security mode

This setting switches between Convenient and Secure mode of the FS.

Syntax: SECUREMODE 0/1

Example:

To set to convenient mode:

```
fprconsole settings securemode 0
```

1.2.2 Logon type

This setting enables (1) or disables (0) the logon application. If the /FUS parameter is used the logon is enabled in Fast User Switching mode if the computer configuration allows this.

Syntax: LOGON 0/1 [/FUS]

1.2.3 CTRL+ALT+DEL message

This setting enables (1) or disables (0) the "Press CTRL+ALT+DEL" text in logon.

Syntax: CAD 0/1

1.2.4 Power-on security

This settings globally turns off (0) power-on security support in the fingerprint software. When the power-on security support is turned off no power-on security wizards or pages are shown and it does not matter what are the BIOS settings.

Syntax: *TBX 0/1*

1.2.5 Power-on security single sign-on

This setting enables (1) or disables (0) the usage of fingerprint used in BIOS in logon to automatically logon user when the user was verified in BIOS.

Syntax: *SS0 0/1*
