

SecurTrac™ AIX Domino version now available!

TORONTO, ON – July 10, 2003 AIX users can instantly add full Domino auditing to key applications and databases. SecurTrac for AIX is available to download now!

This award winning auditing tool is an add-on module that enhances the functionality and management of objects within the Domino environment. SecurTrac enables companies to find out which database application was accessed, who accessed that information, when it was being accessed. Individual field changes are also tracked, including new and old values.

Michael Meakes, Product Manager for Extracomm Technologies Inc. says, “Companies have been using SecurTrac for several years and we are very excited to offer this software to AIX Domino users.”

SecurTrac provides an audit trail so that any activity (malicious, unintentional, normal use) can be addressed quickly. This allows companies to quickly respond and protect knowledge and key data assets. SecurTrac will also assist companies in enabling compliance for regulated industries (21 CFR Part 11, HIPAA, NASD). This software provides central logging services that allow developers to focus on application functionality, as SecurTrac will take care of all auditing requirements. This approach saves development time and money, while allowing faster deployment of business applications.

In addition to tools to monitor databases and mail, SecurTrac provides unique utilities to assist Notes Administrators, including a notes.ini monitor and a Domino Directory monitor.

SecurTrac will benefit multiple levels of staff including Security/Quality Managers, Notes and Database Administrators and Senior management whose responsibility is to manage and protect confidential and sensitive information.

To experience what SecurTrac can do for your company, simply visit and register at the SecurTrac website - <http://www.securtrac.com>.
