Notes to Quick Reference Guide

Use this RS/6000 Quick Reference Guide as your source of RS/6000 product information. The Quick reference charts make it easy to compare models. For more detailed information and complete specifications, please refer to HONE Announcement Letters, the HONE Configurator, and the PC Configurator.

References in this guide to IBM products do not imply that IBM intends to make these available in all countries in which IBM operates.

This guide could contain technical inaccuracies or typographical errors. All prices and performance numbers shown are informational only and are subject to change or correction without notice.

When using this guide, the product information is organized by machine type, model and feature. If a feature has a model number associated with it, then that feature is only available on that specific model. If the feature has *** in the model column, then that feature is valid for all models in the machine type.

RS/6000 Quick Reference
IBM
Bldg 3 MD 3324
Somers, NY 10589

Do not print this line or the one below. Below is the footer referenced in the 'Page Setup'.

*** Feature is valid for all models in the machine type.

Standard Features

7043-140
RS/6000 43P Series Model 140
Workstation/Entry-Level Workgroup Server

200MHz PowerPC 604e processor
Upgradeable to 233MHz or 332MHz
64MB/768MB ECC memory
1MB asynchronous Level 2 cache
32KB/32KB data/instruction cache
6 memory slots
5 disk/media bays (1 disk and 1 media available)
5 expansion slots (3 32-bit PCI and 2 shared PCI/ISA slots)
2.1GB SCSI-2/18.1GB SCSI-2 internal disk
Expandable to 291GB SCSI-2 or 873GB SSA disk
Integrated SCSI-2 Fast/Wide controller
Integrated ethernet port (thick and twisted pair)
Integrated keyboard, mouse, and tablet ports
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
Stereo audio
2 serial ports and 1 parallel port
1-2 user full-function AIX V4.1.5, V4.2.1 or V4.3 server license

7043-240
RS/6000 43P Series Model 240
Workstation/Entry-Level Workgroup Server

233MHZ PowerPC 604e processor
Upgradeable to 2-way SMP
64MB/1GB ECC memory
512KB Level 2 cache per processor
32KB/32KB data/instruction cache
8 memory slots
5 disk/media bays (1 disk and 1 media available)
5 expansion slots (2 32-bit PCI, 1 64-bit PCI and 2 ISA slots)
2.1GB SCSI-2/22.7GB SCSI-2 internal disk
Expandable to 1.08TB SCSI-2 or 873GB SSA disk
Integrated SCSI-2 Fast/Wide controller
Integrated ethernet port (thick and twisted pair)
Integrated keyboard, mouse, and tablet ports
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
Stereo audio
2 serial ports and 1 parallel port
1-2 user full-function AIX V4.1.5, V4.2.1 or V4.3 server license

Standard Features (Cont.)

7024-F50
RS/6000 Model F50
Workgroup Server

166MHz PowerPC 604e processor with X5 cache
Upgradeable to 2, 3, or 4-way SMP
128MB/3GB ECC memory
256KB Level 2 ECC X5 cache per processor
32KB/32KB data/instruction L1 cache per processor
2 memory slots
22 disk/media bays (10 standard, 12 optional)
9 expansion slots (5 32-bit PCI, 2 64-bit PCI and 2 shared PCI/ISA)
4.5 GB hot-swappable Ulta SCSI/90.9GB SCSI-2 internal disk
Expandable to 4.8TB SCSI-2 or 3.5TB SSA disk
Dual integrated SCSI-2 Fast/Wide controller
Ethernet 10baseT controller
Integrated keyboard and mouse ports
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
3 serial ports and 1 parallel port
Standard SystemGuard service processor
Supports hot-swappable disks and internal RAID support
1-2 user full-function AIX V4.2.1 or V4.3 server license

7026-H50
RS/6000 Model H50
Enterprise Server

332 MH7 604e PowerPC processor with X5 cache
Upgradeable to 2, 3 or 4-way SMP
128MB/3GB ECC memory
32KB/32KB data/instruction L1 cache per processor
256KB Level 2 cache per processor
2 memory slots
16 disk/media bays (13 disk [1 used], and 3 media [2 used] available)
9 expansion slots (5 32-bit PCI, 2 64-bit PCI and 2 shared PCI/ISA)
3 PCI buses
4.5GB SCSI-2 Fast/Wide / 118.2GB SCSI-2 internal disk
Expandable to 4.8TB SCSCI-2 or 3.5TB SSA disk
Dual integrated SCSI-2 Fast/Wide controllers
Integrated ethernet with 10buses and 10baseT controllers
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
3 serial ports and 1 parallel port
Standard service processor
Base power supply
Recommended for use in the Model S00 Rack
Supports hot-swappable disks
Supports "under-the-covers" SSA RAID capability
1-2 user full function AIX V4.2.1 or V4.3 server license

Standard Features (Cont.)

7015-R50
RS/6000 Model R50
Enterprise Server

Dual 200MHz PowerPC 604e processors
Upgradeable to 4, 6 or 8-way SMP
256MB/4GB ECC memory
32KB/32KB data/instruction L1 cache per processor
2MB Level 2 cache per processor
4 memory slots
3 disk/media bays (1 available)
16 Micro Channel expansion slots (15 available)
4.5 GB hot-swappable Ulta SCSI/9.1GB SCSI-2 internal disk
Expandable to 2.7TB SCSI-2 or 6.9TB SSA disk
Integrated SCSI-2 Fast/Wide Differential controller
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
2 serial ports and 1 parallel port
Standard SystemGuard service processor
Dual redundant power supplies
Requires separate R00 system rack
1-2 user full-function AIX V4.1.5, V4.2.1 or V4.3 server license

7024-E30
RS/6000 Model E30
Workgroup Server

166MHz Power PC 604 processor
Upgradeable to 233MHz or 332MHz
64MB/1GB ECC memory
512KB Level 2 cache
16KB/16KB data/instruction cache
8 DIMM memory slots
8 disk/media bays (5 available)
8 expansion slots (5 PCI and 2 ISA and 1 shared PCI/ISA slots)
2.1GB SCSI-2/27.0GB SCSI-2 internal disk
Expandable to 3.2TB SCSI-2 or 2.6TB SSA disk
Integrated SCSI-2 Fast/Wide controller
Integrated keyboard and mouse ports
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
2 serial ports and 1 parallel port
Supports optional SystemGuard service processor
1-2 user full-function AIX V4.1.5, V4.2.1 or V4.3 server license

7024-F40
RS/6000 Model F40
Workgroup Server

233MHz PowerPC 604e processor
Upgradeable to 2-way SMP
64MB/1GB ECC memory
1MB Level 2 cache per processor
32KB/32KB data/instruction cache per processor
8 memory slots
22 disk/media bays (10 standard, 12 optional)
9 expansion slots (5 32-bit PCI, 2 64-bit PCI and 2 shared PCI/ISA)
2.2 GB hot-swappable SCSI-2/81.9GB SCSI-2 internal disk
Expandable to 4.8TB SCSI-2 or 2.6TB SSA disk
Dual integrated SCSI-2 Fast/Wide controller (one externalized)
Integrated ethernet port (thick and twisted pair)
Integrated keyboard, mouse, and tablet ports
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
Stereo audio
2 serial ports and 1 parallel port
Supports optional SystemGuard service processor
Supports hot-swappable disks and internal RAID support
1-2 user full-function AIX V4.1.5, V4.2.1 or V4.3 server license

7012-397
RS/6000 Model 397
Workstation/Server

160MHz POWER2 Super Chip (P2SC)
128MB/1GB ECC memory
128KB/32KB data/instruction
4 memory slots
6 disk/media bays (2 disk and 2 media available)
4 Micro Channel expansion slots
4.5 GB SCSI-2 F/W/27.3GB SCSI-2 internal disk
Expandable to 1.5TB SCSI-2 or 3.4TB SSA disk
Integrated SCSI-2 Fast/Wide controller
Integrated ethernet controller
Integrated keyboard, mouse and tablet ports
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
2 serial ports and 1 parallel port
1-2 user full-function AIX V4.1.5, V4.2.1 or V4.3 server license

7013-J50
RS/6000 Model J50
Enterprise Server

Dual 200MHz PowerPC 604e processors
Upgradeable to 4, 6, or 8-way SMP
256MB/4GB ECC memory
32KB/32KB data/instruction L1 cache per processor
2MB Level 2 cache per processor
4 memory slots
8 disk/media bays (5 hot pluggable disk and 3 media)
7 Micro Channel expansion slots (6 available)
Optional 8 M/C with J01 Expansion
4.5 GB SCSI-2F/W/63.7GB SCSI-2 internal disk
Expandable to 2.6TB SCSI-2 or 3.4TB SSA disk
SCSI-2 Fast/Wide Differential controller
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
3 serial ports and 1 parallel port
Standard SystemGuard service processor
Supports hot-swappable disks
1-2 user full-function AIX V4.1.5, V4.2.1 or V4.3 server license

7017-S70
RS/6000 Model S70
Enterprise Server

Central Electronic Complex
4-way 125MHz PowerPC RS64 processors (64-bit)
Upgradeable to 8 or 12-way SMP
512MB/16GB ECC memory
64KB/64KB data/instruction cache per processor
4MB ECC Level 2 cache per processor
20 memory slots

I/O Rack with base I/O drawer
16 disk/media bays (11 hot-swappable disk and 2 media available)
14 PCI expansion slots (5 64-bit and 9 32-bit PCI) (11 available)
4.5GB hot-swappable SCSI-2 F/W/218.4GB SCSI-2 internal disk
Expandable to 1.3TB SCSI-2 or 14.0TB SSA disk
Two SCSI-2 Fast/Wide PCI controller
Integrated keyboard and mouse ports
3.5-inch diskette drive
20X max SCSI-2 CD-ROM
2 serial ports and 1 parallel port
Standard SystemGuard service processor
Standard hot-swappable disk bays
1-2 user full-function AIX V4.3 for Servers license
Each I/O rack can support 2 I/O drawers
Maximum 4 drawers per system

System Units - Servers

Machine Type	Model	List Price	Processor Chip	Num. of Processors	Processor MHz	Memory Standard	Memory Max.	Data Cache	Instruction Cache	Memory Slots	Available I/O Slots

PERFORMANCE of RS/6000 SYSTEMS

This document contains the latest performance information for the RS/6000 models including the new Enterprise Server Model H50, and the processor upgrade for the F50.

Section One contains the SPEC and Linpack results for all of the current RS/6000 systems.

Section Two contains the Commercial performance for all the current RS/6000 Server systems.

Section Three reflects the published TPC-C and TPC-D results to date for RS/6000 systems.

All performance measurements were made with systems running the AIX operating system. For new and upgraded systems, AIX Version 4.2.1 or 4.3.0 was used. All other systems used previous versions of AIX.

NOTES ON PERFORMANCE BENCHMARKS AND VALUES

The performance benchmarks and the values shown here were derived using particular, well configured, development-level computer systems. Unless otherwise indicated for a system, the values were derived using 32 bit applications and external cache if external cache is supported on the system. All performance benchmark values are provided "AS IS" and no warranties or guarantees are expressed or implied by IBM. Actual system performance may vary and is dependent upon many factors including system hardware configuration and software design and configuration. Buyers should consult other sources of information to evaluate the performance of systems they are considering buying and should consider conducting application oriented testing. For additional information about the performance benchmarks, values and systems tested, please contact your IBM local Branch Office or IBM Authorized Reseller or access the following on the Web:

    SPEC   -   http://www.specbench.org
    TPC   -   http://www.tpc.org
    Linpack   -   http://www.netlib.no/netlib/benchmark/performance.ps

Unless otherwise indicated for a system, the performance benchmarks were conducted using AIX v 4.2.1. IBM C for AIX 4.1.0.1 and XL Fortran v 5.1.0.0 were the compilers used in the benchmark tests. The preprocessors used in the benchmark tests include KAP 3.2 for Fortran and KAP/C 1.4.2 from Kuck & Associates and VAST-2 v 4. 01X8 from Pacific-Sierra Research. The preprocessors were purchased separately from these vendors.

The following SPEC and Linpack benchmarks reflect the performance of the microprocessor, memory architecture and compiler of the tested system:

SPECint95 - SPEC component-level benchmark that measures integer performance. Result is the geometric mean of eight tests that comprise the CINT95 benchmark suite. All of these are written in C language. SPECint_95 is the result of the same tests in CINT95 with a maximum of four compiler flags that must be used in all eight tests.

SPECint_rate95 - Geometric average of the eight SPEC rates from the SPEC integer tests (CINT95). SPECint_base_rate 95 is the result of the same test as CINT95 with a maximum of four compiler flags that must be used in all eight tests.

SPECfp95 - SPEC component-level benchmark that measures floating point performance. Result is the geometric mean of ten tests, all written in FORTRAN, that are included in the CFP95 benchmark suite. SPECfp_base95 is the result of the same test in CFP95 with a maximum of four compiler flags that must be used in all ten tests.

SPECfp_rate95 - Geometric average of the ten SPEC rates from SPEC floating point tests (CFP95). SPEC_base_rate95 is the result of the same tests as CFP95 with a maximum of four compiler flags that must be used in all ten tests.

SPECweb96 - Maximum number of Hypertext Transfer Protocol (HTTP) operations per second achieved on the SPECweb96 benchmark without significant degradation of response time. The Web server software is ZEUS v.1.1 from Zeus Technology Ltd.

LINPACK DP (Double Precision) - n=100 data array. Units are Megaflops.

LINPACK SP (Single Precision) - n=100 data array. Units are Megaflops.

LINPACK TPP (Toward Peak Performance) - n=1,000 data array. Units are Megaflops.

The following Transaction Processing Council (TPC) benchmarks reflect the performance of the microprocessor, memory subsystem, disk subsystem and some portions of the network:

tpmc - TPC Benchmark C throughput measured as the average number of transactions processed per minute during a valid TPC-C configuration run of at least twenty minutes.

$/tpmC - TPC Benchmark C price-performance ratio reflects the estimated five year total cost of ownership for system hardware, software and maintenance and is determined by dividing such estimated total cost by the tpmC for the system.

QppD is the power metric of TPC-D and is based on a geometric mean of the 17 TPC-D queries, the insert test and the delete test. It measures the ability of the system to give a single user the best possible response time by harnessing all available resources. QppD is scaled based on data base size from 30 GB to 1 TB

QthD is the throughput metric of TPC-D and is a classical throughput measure characterizing the ability of the system to support a multi-user workload in a balanced way. A number of query users is chosen, each of which must execute the full set of 17 queries in a different order. In the background, there is an update stream that runs a series of insert/delete operations. QthD is scaled based on the database size from 30 GB to 1 TB.

$/QphD is the price/performance metric for the TPC-D benchmark where QphD is the geometric mean of QppD and QthD. The price is the five year cost of ownership for the tested configuration and includess maintenance and software support.

NOTES ON PERFORMANCE ESTIMATES

Relative OLTP (ROLTP) is an estimate of commercial processing performance derived from an IBM analytical model. The model simulates some of the system's operations such as CPU, cache and memory. However, the model does not simulate disk or network I/O operations. Although the model uses general database and operating system parameters, the model does not reflect specific databases or AIX version releases. Unless otherwise indicated for a system, the model assumes the use of 32-bit applications. Unless otherwise indicated for a system, ROLTP is estimated only at the time the system is introduced. An IBM RS/6000 Model 250 is the baseline reference system and has a value of 1.0. Although ROLTP may be used to compare estimated RS/6000 commercial processing performance, actual system performance may vary and is dependent upon many factors including system hardware configuration and software design and configuration. All performance estimates are provided "AS IS" and no warranties or guarantees are expressed or implied by IBM. Buyers should consult other sources of information, including system benchmarks, to evaluate the performance of a system they are considering buying. For additional information about ROLTP, system performance and/or benchmark, please contact your IBM local Branch Office or IBM Authorized Reseller or access the following on the Web:

SPEC   -   http://www.specbench.org
TPC   -   http://www.tpc.org
Linpack   -   http://www.netlib.no/netlib/benchmark/performance.ps
