

XSyncronize, XSetAfterFunction – enable or disable synchronization

```
int (*XSyncronize(display, onoff))()
    Display *display;
    Bool onoff;
int (*XSetAfterFunction(display, procedure))()
    Display *display;
    int (*procedure)();
```

display Specifies the connection to the X server.

procedure Specifies the procedure to be called.

onoff Specifies a Boolean value that indicates whether to enable or disable synchronization.

The **XSyncronize** function returns the previous after function. If onoff is **True**, **XSyncronize** turns on synchronous behavior. If onoff is **False**, **XSyncronize** turns off synchronous behavior.

The specified procedure is called with only a display pointer. **XSetAfterFunction** returns the previous after function.
