XtGetSelectionParameters − retrieve target parameters for a selection request with a single target

void XtGetSelectionParameters(*owner*, *selection*, *request_id*, *type_return*, *value_return*, *length_return*, *format_return*)
    Widget *owner*;
    Atom *selection*;
    XtRequestId *request_id*;
    Atom* *type_return*;
    XtPointer* *value_return*;
    unsigned long* *length_return*;
    int* *format_return*;

owner	Specifies the widget that owns the specified selection.
selection	Specifies the selection being processed.
request_id	Specifies the requestor id in the case of incremental selections, or NULL in the case of atomic transfers.
type_return	Specifies a pointer to an atom in whcih the property type of the parameters will be stored.
value_return	Specifies a pointer into which a pointer to the parameters are to be stored. A NULL will be stored if no parameters accompany the request.
length_return	Specifies a pointer into which the number of data elements in *value_return* of size indicated by *format_return* will be stored.
format_return	Specifies a pointer into which the size in bits of the parameter data in the elements of *value_return* will be stored.

XtGetSelectionParameters may only be called from within an **XtConvertSelectionProc** or from within the last call to an **XtConvertSelectionIncrProc** with a new request_id.
