

XtGetSelectionRequest – retrieve the event that triggered the **XtConvertSelectionProc**

XSelectionRequestEvent* **XtGetSelectionRequest**(*w*, *selection*, *request_id*)

Widget *w*;

Atom *selection*;

XtRequestId *request_id*;

w Specifies the widget.

selection Specifies the selection being processed.

request_id Specifies the requestor id in the case of incremental selections, or NULL in the case of atomic transfers.

XtGetSelectionRequest may only be called from within an **XtConvertSelectionProc** procedure and returns a pointer to the **SelectionRequest** event that caused the conversion procedure to be invoked.

Request_id specifies a unique id for the individual request in the case that multiple incremental transfers are outstanding. For atomic transfers, *request_id* must be specified as NULL. If no **SelectionRequest** event is being processed for the specified *widget*, *selection*, and *request_id*, **XtGetSelectionRequest** returns NULL.
