XtSessionGetToken, XtSessionReturnToken − token management for checkpointing

XtCheckpointToken XtSessionGetToken(*w***,** *type***)**
    Widget *w***;**
    int *type***;**
void XtSessionReturntoken(*token*)
    XtCheckpointToken *token*;

w	Specifies the session widget.
type	Specifies the value in the type field of the token.
token	Specifies the token to be returned.

The XtSessionGetToken function will return NULL if the checkpoint operation instigated by the session manager is not currently under way.

To indicate the completion of a deferred save operation and to return the checkpoint token use **XtSession-ReturnToken**.
