# IBM Token-Ring Network

## Introduction and Planning Guide

---

GA27-3677-03

**Fourth Edition (September 1990)**

Changes are made periodically to the information herein; these changes will be incorporated in new editions of this publication.

Any reference to an IBM program product in this document is not intended to state or imply that only IBM's program product may be used. Any functionally equivalent program may be used instead. It is possible that this material may contain reference to, or information about, IBM products (machines and programs), programming, or services that are not announced in your country. Such references or information must not be construed to mean that IBM intends to announce such IBM products, programming, or services in your country.

Publications are not stocked at the address given below; requests for IBM publications should be made to your IBM representative or to the IBM branch office serving your locality.

A form for reader's comments is provided at the back of this publication. If the form has been removed, comments may be addressed to IBM Corporation, Communication Systems Information Development, Department E02, P.O. Box 12195, Research Triangle Park, North Carolina, U.S.A. 27709. IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation whatever. You may, of course, continue to use the information you supply.

**Note to US Government Users** — Documentation related to restricted rights — Use, duplication or disclosure is subject to restrictions set forth in GSA ADP Schedule contract with IBM Corp.

### **Federal Communications Commission (FCC) Statement**

**Note:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. IBM is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

### **Telecommunications Safety Requirements in the United Kingdom**

The IBM Token-Ring Network products are made to high safety standards. They comply inherently with telecommunications safety standard BS6301. They are not designed to provide protection from excessive voltages appearing externally at their interfaces. Therefore, when these products are connected to a public telecommunications network via any other equipment, and you connect to these products items not supplied by IBM United Kingdom Ltd., you must comply with mandatory telecommunications safety requirements.

You may do this either by choosing products which also are approved as complying to BS6301 or British Telecom Technical Guide No.26, or by the use of approved safety barriers. Consult the local office of your public telecommunications operator for advice and permission to make the connections.

### **Canadian Department of Communications compliance statement**

This equipment does not exceed Class A limits per radio noise emissions for digital apparatus, set out in the Radio Interference Regulation of the Canadian Department of Communications. Operation in a residential area may cause unacceptable interference to radio and TV reception requiring the owner or operator to take whatever steps are necessary to correct the interference.

### **Avis de conformité aux normes du ministère des Communications du Canada**

Cet équipement ne dépasse pas les limites de Classe A d'émission de bruits radioélectriques pour les appareils numériques, telles que prescrites par le Règlement sur le brouillage radioélectrique établi par le ministère des Communications du Canada. L'exploitation faite en milieu résidentiel peut entraîner le brouillage des réceptions radio et télé, ce qui obligerait le propriétaire ou l'opérateur à prendre les dispositions nécessaires pour en éliminer les causes.

### **Japanese Voluntary Control Council for Interference (VCCI) Statement**

This equipment is Class 1 Equipment (information equipment to be used in commercial and industrial districts) which is in conformance with the standard set by Voluntary Control for Interference by Data Processing Equipment and Electronic Office Machines (VCCI) with an aim to prevent radio interference in commercial and industrial districts.

This equipment could cause interference to radio and television receivers when used in and around residential districts.

Please handle the equipment properly according to the instruction manual.

---

## Special Notices

The following special notices apply to this publication.

### System Security Advice

This product is intended for use within a single establishment and within a single, homogeneous user population. For sensitive applications requiring isolation from each other, management may wish to provide isolated cabling or to encrypt the sensitive data before putting it on the network.

### Trademarks

The following terms, which are denoted by an asterisk (\*) in this publication, are trademarks of the IBM Corporation in the United States and/or other countries:

AS/400

IBM

Operating System/2

OS/2

PC Network

Personal System/2

### IBM Token-Ring Network OEMI

The following documents, together, comprise the IBM Token-Ring Network Other Equipment Manufacture Interface.

- *IBM Cabling System Technical Interface Specification, GA27-3773*
- *IBM Local Area Network Technical Reference, SC30-3383*
- *IBM Token-Ring Network Architecture Reference, 6165877*
- *Token Ring Access Method and Physical Layer Specification, IEEE Standard 802.5-1989.*

---

## Preface

This manual is written for the person who will plan for the installation of an IBM Token-Ring Network.

The most important requirement for you as a network planner is to be familiar with the needs of your organization. You do not need a background in Local Area Networks (LANs), but you should be familiar with the prerequisite publications listed below. This manual introduces you to the IBM Token-Ring Network and explains the process of planning the network in detail.

The IBM Token-Ring Network has been designed to be used with the IBM Cabling System. This manual can be used to plan networks for buildings that have already been wired with the IBM Cabling System and buildings for which permanently installed IBM Cabling System cable is planned.

There are various other media that the IBM Token-Ring Network may use.

For a network operating at 4 megabits per second (Mbps), you may, for instance, want to use IBM Cabling System patch cables instead of permanently installed building cable. In that case, see the *IBM Token-Ring Network Guide to Small Networks*. See Appendix A of this manual to plan 16 Mbps rings using patch cables.

For networks operating at 4 Mbps, you may want to use telephone twisted-pair media. See the *IBM Token-Ring Network Telephone Twisted-Pair Media Guide* for information about planning networks using that media.

Optical fiber cables can be used for networks operating at both 4 and 16 Mbps. If you want to use optical fiber cables and are planning a new installation, see Appendix D of this manual for information about using 62.5/125-micron optical fiber cable. However, if you want to use another size of optical fiber cable, see the *IBM Token-Ring Network Optical Fiber Cable Options* manual for guidance in qualifying other kinds of optical fiber cable for use with the IBM Token-Ring Network.

---

## Prerequisite Publications

The following IBM publications are available from your IBM representative or your local IBM branch office:

- *A Building Planning Guide for Communication Wiring*, G320-8059
- *Introduction to Local Area Networks*, GC20-8203
- *IBM Cabling System Planning and Installation Guide*, GA27-3361
- *Using the IBM Cabling System with Communication Products*, GA27-3620.

---

## Related Publications

Consult the following publications for additional information about the IBM Token-Ring Network. To obtain these publications, contact your IBM representative or your local IBM branch office.

- *IBM Token-Ring Network Guide to Small Networks*, SK2T-0300
- *IBM Token Ring Network Telephone Twisted-Pair Media Guide*, GA27-3714
- *IBM Token-Ring Network Optical Fiber Cable Options*, GA27-3747
- *IBM Local Area Network Administrator's Guide*, GA27-3748
- *IBM Token-Ring Network Installation Guide*, GA27-3678
- *IBM Token-Ring Network Problem Determination Guide*, SY27-0280
- *IBM Local Area Network Technical Reference*, SC30-3383
- *IBM Token-Ring Network Architecture Reference*, SC30-3374
- *IBM Cabling System Technical Interface Specification*, GA27-3773.

In addition to the publications listed above, IBM Token-Ring Network hardware and program products are accompanied by the documentation that is specific to that product.

The contents and relationships among these publications are shown in the following chart.

Title	Planning	Cable Installation	Network Introduction	Network Installation	Network Software	Network Theory	Problem Determination

## Using this Manual

*Chapter 1* contains important introductory material about the IBM Token-Ring Network. You should read it first.

*Chapter 2* describes planning both 4 and 16 Mbps networks for buildings with permanently installed IBM Cabling System cable. As you read Chapters 1 and 2, you may find it helpful to consult the charts in the pocket in the back of the manual depicting typical IBM Token-Ring Network installations.

*Chapter 3* describes how to fill out the planning charts so that both installation and problem determination can be accomplished easily.

*Chapter 4* describes the connections available to the rest of your establishment's network. Joining rings together using bridges, using gateways, and direct connection to host computers are all discussed.

*Chapter 5* describes how to schedule and supervise the installation and checkout of an IBM Token-Ring Network.

*Chapter 6* helps you to ensure that changes to the network, including migration from a 4 Mbps network to a 16 Mbps network, are completely planned and documented. Always remember that accurate network documentation is vital for network maintenance and problem determination.

*Appendix A* will help you if your installation does not fit within the guidelines in Chapter 2.

*Appendix B* provides you with blank planning forms. You may make as many copies of these forms as you need to plan your network.

*Appendix C* contains a sample program listing that will help you automate the record-keeping described in Chapter 2.

The charts in the pocket in the back of the manual depict typical IBM Token-Ring Network configurations and show filled-in copies of the forms necessary to plan the network. Many of the illustrations in the manual are portions of these charts used to highlight portions of the planning process.

*Appendix D* contains a specification for 62.5/125-micron optical fiber cable that is both suitable for use with IBM Token-Ring Networks and meets the standards of the cable specified by the Fiber Distributed Data Interface standard.

The *Glossary* defines terms that apply to LANs in general and the IBM Token-Ring Network in particular.

---

## Changes to this Edition

This edition adds information about the IBM 8230 Controlled Access Unit. Information about using IBM 8218 Copper Repeaters and IBM 8219 Optical Fiber Repeaters has been moved from Chapter 2 to Appendix A. Appendix D has been added to offer guidance on selecting optical fiber cables for use with IBM Token-Ring Networks.

# Contents

<b>Chapter 1. Understanding the IBM Token-Ring Network</b> .....	1-1
IBM Token-Ring Network Operation .....	1-2
The Serially Wired Ring .....	1-3
The Star-Wired Ring .....	1-3
Connecting Rings Together with Bridges .....	1-5
Addressing .....	1-6
Performance Considerations .....	1-7
Planning Strategies .....	1-8
IBM Token-Ring Network Components .....	1-9
IBM Token-Ring Network Adapters .....	1-9
IBM Token-Ring Network 8230 Controlled Access Unit .....	1-9
IBM Token-Ring Network 8228 Multistation Access Unit .....	1-13
Component Housing .....	1-14
IBM Token-Ring Network 8220 Optical Fiber Converter .....	1-15
IBM Token-Ring Network 8218 Copper Repeater .....	1-16
IBM Token-Ring Network 8219 Optical Fiber Repeater .....	1-17
Surface-Mounting Bracket .....	1-18
Rack-Mounting Assembly .....	1-18
Crossover Patch Cable .....	1-19
Optical Fiber BNC-to-Biconic Patch Cables .....	1-20
Optical Fiber Biconic-to-Biconic Patch Cables .....	1-21
Optical Fiber Dual Socket Clip .....	1-21
IBM Cabling System Patch Cables .....	1-22
Network Management and Diagnostic Tools .....	1-23
Network Software Capabilities .....	1-23
<b>Chapter 2. Planning a Network Using Permanently Installed Cable</b> .....	2-1
What You Will Need .....	2-2
General Guidelines for Planning Your Network .....	2-3
Placing Attaching Devices on Your Building Plans .....	2-4
Estimating Ring Performance .....	2-7
Determining Ring Size .....	2-10
Rings Using a Single Wiring Closet without Separate Repeaters or Converters .....	2-10
Multiple-Wiring-Closet Rings with 8230s and 8228s .....	2-14
Rings Using Multiple Wiring Closets Containing 8228s .....	2-19
<b>Chapter 3. Filling Out the Planning Documents</b> .....	3-1
Numbering and Labeling Your IBM Token-Ring Network .....	3-2
Numbering Attaching Devices .....	3-4
The Rack Inventory Chart .....	3-5
The IBM 8230 Cabling Chart .....	3-6
The IBM 8228 Cabling Chart .....	3-9
The IBM 8218 Cabling Chart .....	3-12
The IBM 8219 Cabling Chart .....	3-14
The IBM 8220 Cabling Chart .....	3-16
The Ring Sequence Chart .....	3-18
Section 3 of the IBM 8228 Cabling Chart .....	3-24
Section 2 of the IBM 8218 Cabling Chart .....	3-25
Section 2 of the IBM 8219 Cabling Chart .....	3-26
Section 2 of the IBM 8220 Cabling Chart .....	3-27
The Locator Charts .....	3-28

Filling Out the Network Ordering Worksheet .....	3-30
Spare Network Components .....	3-30
Network Ordering Worksheet .....	3-31
<b>Chapter 4. Connecting to the Establishment Network</b> .....	4-1
Network Topologies Using Bridges .....	4-2
The Simple Connection .....	4-3
The Parallel Connection .....	4-3
Hierarchical and Mesh Networks .....	4-4
The Backbone Connection .....	4-6
Physical Planning Considerations .....	4-9
Other Record-Keeping .....	4-9
<b>Chapter 5. Installing your Token-Ring Network</b> .....	5-1
Installing IBM 8230 Controlled Access Units .....	5-1
Installing IBM 8228 Multistation Access Units .....	5-1
Installing IBM 8218 Copper Repeaters .....	5-2
Installing IBM 8219 Optical Fiber Repeaters .....	5-3
Installing IBM 8220 Optical Fiber Converters .....	5-3
Installing Adapters in Attaching Devices .....	5-4
Checking the Operation of Each Ring .....	5-4
Installing Bridges .....	5-4
Checking the Operation of Multiple-Segment Networks .....	5-4
<b>Chapter 6. Changing Configurations</b> .....	6-1
Planning Migration to an IBM Token-Ring Network .....	6-1
Changing Network Configurations .....	6-2
Removing an Attaching Device from the Ring .....	6-2
Adding an Attaching Device to the Ring .....	6-4
Removing an 8230 from a Ring .....	6-6
Removing an 8228 from a Ring .....	6-8
Removing 8218s from a Ring .....	6-10
Removing 8219s from a Ring .....	6-12
Removing 8220s from a Ring .....	6-14
Adding an 8230 to a Ring .....	6-16
Adding an IBM 8228 to a Ring .....	6-18
Adding 8218s to a Ring .....	6-20
Adding 8219s to a Ring .....	6-22
Adding 8220s to a Ring .....	6-24
Dividing a Ring .....	6-26
Joining Two Rings without a Bridge .....	6-27
Migrating from a 4 Mbps Ring to a 16 Mbps Ring .....	6-29
Planning Tasks .....	6-29
Installation Tasks .....	6-30
<b>Appendix A. Additional Considerations for Determining Ring Size Limits</b> .....	A-1
Additional Tables for Calculating Drive Distance .....	A-2
Multiple-Wiring-Closet Rings .....	A-10
Additional Rules for Planning Rings with Repeaters, Converters, and Controlled Access Units .....	A-26
4 and 16 Mbps Rings Using 8219s, 8220s, and 8230s with Optical Fiber Cable .....	A-30
Using Copper Repeaters .....	A-33
Single-Wiring-Closet Rings Using 8228s with Lobes Longer than 100 Meters .....	A-36
Adjustments for Undercarpet (Type 8) Cabling .....	A-36
Adjustments for Excess Patch Cable (Type 6) Length .....	A-36

Adjustments for Additional Patch Cables in the Ring .....	A-37
Adjustments for Replacing Type 1 or Type 2 Cable with Type 6 or Type 9 ..	A-37
Calculations for Substituting Type 6 Cable and Type 8 Cable .....	A-38
Using Surge Suppressors with the IBM Token-Ring Network .....	A-38
<b>Appendix B. Planning Forms</b> .....	B-1
<b>Appendix C. A Sample Program for Filling Out the Planning Charts</b> .....	C-1
Sample Program Listing for LAN4 .....	C-2
Sample Program Listing for CVTFILES .....	C-19
<b>Appendix D. Specifications for 62.5-Micron Optical Fiber Cables</b> .....	D-1
Recommended Optical Fiber Specifications for Commercial Building Wiring	D-1
<b>List of Abbreviations</b> .....	X-1
<b>Glossary</b> .....	X-3
<b>Index</b> .....	X-13
